Sommario/riassunto	Structural and functional abnormalities of arteries and veins manifest clinically in a broad spectrum of disorders, including aneurysmal disease, atherosclerosis, vasculitis, venous insufficiency, microvascular complications, thrombo-embolism and lower limb ulceration. Many of these are common and/or chronic conditions which present for initial

assessment by primary health care workers. This new edition is a practical guide to the most commonly presenting disorders, and provides a structured approach to clinical assessment, investigations and management. The last few years have seen major
