Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Biostatistics and Biomedical Science -- Relative Risk Estimates and Tests for Independent Groups -- Sample Size, Power, and Efficiency -- Stratified-Adjusted Analysis for Independent Groups -- Case-Control and Matched Studies -- Applications of Maximum Likelihood and Efficient Scores -- Logistic Regression Models -- Analysis of Count Data -- Analysis of Event-Time Data -- Appendix: Statistical Theory
Sommario/riassunto	Presenting a broad scope of coverage and the latest research on the topic, the author begins with categorical data analysis methods for cross-sectional, prospective, and retrospective studies of binary, polychotomous, and ordinal data. Subsequent chapters present modern model-based approaches that include unconditional and conditional logistic regression; Poisson and negative binomial models for count

data; and the analysis of event-time data including the Cox proportional hazards model and its generalizations. The book now includes an introduction to mixed models with fixed and random effects as well as expanded methods for evaluation of sample size and power. -- Publisher

Sommario/riassunto

This book presents a series of cases of psychosocial interventions with schizophrenia and other serious mental health difficulties. Co-authored by a range of professionals in different roles, as well as carers and service users. Captures the benefits of a true alliance between the service user and their clinical worker. Details the skills and knowledge needed for interventions in a range of settings, including outreach work and family work, treatment on acute wards, as well as organisational change.
