Sommario/riassunto	Nurse prescribers are now practising within every discipline of nursing and midwifery, both in the community and the hospital setting. This

much-needed book is aimed particularly at students on a non-medical prescribing (NMP) course as well as those nurses who are studying for their community practitioner non-medical prescribing qualification as part of the specialist practice programme. The book is also a useful resource for nursing students and registered nurses who administer and/or prescribe medicines. The authors offer a basic introduction to pharmacological concepts, embedded in specific
