Sommario/riassunto	Long description: The book presents the hermeneutical theory of translation focusing on the translator as a person. Translation is a dynamic task to be performed on the basis of a deep understanding of the original and an adequate strategy for authentic reformulation in another language. The theoretical foundations of hermeneutics laid by Schleiermacher, and later on developed by Heidegger, Gadamer and the phenomenologist Husserl, are presented, combined with a critical discussion of current theories in Translation Studies. The theoretical presentation is complemented by a collection of twelve text examples from various genres for a description of the practical translation process in the English and the German language, when one applies the hermeneutical categories of orientation. Thus the book is not only an introduction to translational hermeneutics but may also be used as a

handbook for translator training.
