Record Nr. UNINA9910813331703321 Mammalian evolution, diversity and systematics / / edited by Frank E. **Titolo** Zachos and Robert J. Asher Pubbl/distr/stampa Berlin; ; Boston:,: De Gruyter,, [2018] ©2018 **ISBN** 3-11-038254-7 3-11-034155-7 1 online resource (394 pages) Descrizione fisica Handbook of Zoology/ Handbuch der Zoologie Collana Disciplina 599 Soggetti Mammals - Evolution Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia Includes bibliographical references and index. Nota di bibliografia Nota di contenuto Frontmatter -- Preface -- Contents -- List of contributing authors --1. Species concepts and species delimitation in mammals / Zachos, Frank E. -- 2. Chromosomes and speciation in mammals / Pavlova, Svetlana V. / Searle, Jeremy B. -- 3. Taxonomy, trees, and truth in historical mammalogy / Asher, Robert J. -- 4. Mammalian embryology and organogenesis / Werneburg, Ingmar / Spiekman, Stephan N. F. --5. Non-Mammalian synapsids: the deep roots of the mammalian family tree / Angielczyk, Kenneth D. / Kammerer, Christian F. -- 6. Mesozoic mammals - early mammalian diversity and ecomorphological adaptations / Martin, Thomas -- 7. Diversity and relationships within crown Mammalia / Asher, Robert J. -- 8. Mammal extinction risk and conservation: patterns, threats, and management / Turvey, Samuel T. -- Index There are nearly 6,000 mammalian species, among them our own. Sommario/riassunto Research on our evolutionary cousins has a long history, but the last 20 years have seen particularly rapid progress in disentangling the interrelationships and evolutionary history of mammals. The present volume combines up-to-date reviews on mammalian phylogenetics with paleontological, taxonomic and evolutionary chapters and also summarizes the historical development of our insights in mammalian

relationships, and thus our own place in the Tree of Life. Our book

places the present biodiversity crisis in context, with one in four mammal species threatened by extinction, and reviews the distribution and conservation of mammalian diversity across the globe. This volume is the introductory tome to the new Mammalia series of the Handbook of Zoology and will be essential reading for mammalogists, zoologists and conservationists alike.
