Nota di bibliografia Includes bibliographical references and index. Nota di contenuto Frontmatter -- Foreword -- Contents -- Introduction -- Chapter 1 Strip-method of signal transformation -- Chapter 2 Optimal Chebyshev pre-distortion and filtration -- Chapter 3 Strip-method of image transformation -- Chapter 4 Hardware implementation of the stripmethod -- Conclusion -- Appendix Hadamard matrices and the matrices close to them -- Bibliography -- Index Sommario/riassunto This work deals with the matrix methods of continuous signal and image processing according to which strip-transformation is used. The authors suggest ways to solve a problem of evaluating potential noise immunity and synthesis of an optimal filter for the case of pulse noises. of applying the two-dimensional strip-transformation for storage and noise immune transmission of images. The strip-transformation of images is illustrated by examples and classes of images invariant relative to symmetrical orthogonal transformations. The monograph is intended for scientists and specialists whose activities are connected with computer signals and images processing, instrumentation and

metrology. It can also be used by undergraduates, as well as by post-

graduates for studying computer methods of signal and image

processing.
