Sommario/riassunto

This seminal study explores the significant changes in the global IT industry as production has shifted from the developed world to massive sites in the developing world that house hundreds of thousands of workers in appalling low-wage conditions to minimize labor costs. The authors trace the development of the new networks of globalized mass production in the IT industry and the reorganization of work since the 1990s, capturing the systemic nature of an industry-wide restructuring of production and work in the global context. Their wide-ranging and detailed analysis takes the deba
