| 1. Record Nr.           | UNINA9910813469203321   |
| Autore                  | Boyes Stephen J.  |
| Titolo                  | Reverberation chambers : theory and applications to EMC and antenna measurements // Stephen J Boyes, Yi Huang   |
| Pubbl/distr/stampa      | West Sussex, England : , : Wiley, , 2016<br>©2016   |
| ISBN                    | 1-118-90626-8<br>1-118-90625-X<br>1-118-90627-6   |
| Descrizione fisica      | 1 online resource (254 p.)  |
| Disciplina              | 621.382/4   |
| Soggetti                | Antennas (Electronics) - Design and construction - Technique<br>Electromagnetic measurements<br>Radio frequency oscillators<br>Electromagnetic compatibility  |
| Lingua di pubblicazione | Inglese   |
| Formato                 | Materiale a stampa  |
| Livello bibliografico   | Monografia  |
| Note generali           | Description based upon print version of record.   |
| Nota di bibliografia    | Includes bibliographical references and index.  |
| Nota di contenuto       | Title Page; Copyright Page; Contents; About the Authors; Acknowledgements; Chapter 1 Introduction; 1.1 Background; 1.2 This Book; References; Chapter 2 Reverberation Chamber Cavity Theory; 2.1 Introduction; 2.2 Cavity Modes and Electromagnetic Fields; 2.3 Mode Stirring Techniques; 2.3.1 Mechanical Stirring; 2.3.2 Polarisation Stirring; 2.3.3 Platform and Position Stirring; 2.3.4 Frequency Stirring; 2.4 Plane Wave Angle of Arrival; 2.5 Average Mode Bandwidths; 2.6 Chamber Quality (Q) Factor; 2.7 Statistical Forms; 2.7.1 Statistical Methods of Analysis<br>2.7.2 Statistical Forms of Measured Magnitudes 2.7.3 Statistical Distribution of Complex Samples; 2.7.4 Statistical Distribution of Measured Power; 2.7.5 Statistical Distribution of Measured Phase; 2.7.6 Concluding Remarks and Recommendations; 2.8 Line of Sight Elements; 2.9 Reverberation Chamber as a Radio Propagation Channel; 2.9.1 Channel Parameters; 2.9.2 Coherence Bandwidth; 2.9.3 Doppler Shift Frequency; 2.9.4 Summary; References; Chapter 3 Mechanical Stirrer Designs and Chamber Performance Evaluation; 3.1 Introduction; 3.2 |

Paddle Design Methodology; 3.3 Numerical Analysis  
3.3.1 Effect of the Number of Cuts 3.3.2 Effect of the Periodicity of the  
Cuts; 3.3.3 Effect of the Shape of the Cuts; 3.3.4 Complex Nature of the  
Cuts; 3.3.5 Variation in Paddle Dimensions; 3.4 Comments on Practical  
Validation; 3.5 Measurement Parameters for Validation; 3.6  
Measurement Results; 3.6.1 Standard vs New Designs: Unloaded  
Chamber Uncertainty; 3.6.2 Standard vs New Designs: Loaded  
Chamber; 3.7 Summary; References; Chapter 4 EMC Measurements  
inside Reverberation Chambers; 4.1 Introduction to EMC; 4.2 EMC  
Standards; 4.3 EMC Measurements and Tests  
4.4 EMC Measurements Inside Reverberation Chambers 4.4.1 Relevant  
EMC Standards Using Reverberation Chambers; 4.4.2 Chamber  
Characterisation; 4.4.3 Radiated Immunity Tests; 4.4.4 Radiated  
Emission Measurements; 4.4.5 An Example of Radiated Emission  
Measurements; 4.5 Comparison of Reverberation Chamber and Other  
Measurement Facilities for EMC Measurements; 4.6 Conclusions;  
Acknowledgements; References; Chapter 5 Single Port Antenna  
Measurements; 5.1 Introduction; 5.2 Definitions and Proof: Antenna  
Efficiency; 5.2.1 Radiation Efficiency; 5.2.2 Total Radiation Efficiency  
5.3 Definitions: Textile Antennas 5.4 Measurement Procedures; 5.5  
Free Space Measurement Investigation; 5.5.1 Free Space Performance;  
5.5.2 General Problems to Avoid; 5.6 On-Body Antenna Measurements;  
5.6.1 Chest (0 mm) Body Location Investigation; 5.6.2 Elbow (0 mm)  
Bent Location Investigation; 5.6.3 Back (0 mm) Body Location  
Investigation; 5.6.4 Chest 20 mm Body Location Investigation; 5.7  
Theoretical and Simulated Evidence; 5.8 Measurement Uncertainty; 5.9  
Summary; References; Chapter 6 Multiport and Array Antennas; 6.1  
Introduction; 6.2 Multi-port Antennas for MIMO Applications  
6.3 Measurement Parameters
