   Sommario/riassunto The papers of the volume mirror the ongoing debate on approaches
                     towards two related topics: conjunction and ellipsis. The major issues
                     are the syntactic relationship between the conjuncts, the syntactic
                     category of the conjunction words, the size of the conjuncts, the
                     syntactic and semantic status of the null elements, and semantic and
                     information structural restrictions. A wide range of facts from various
                     languages are explored in relation to phrasal coordination, Gapping,
                     Pseudogapping, VP-ellipsis, and Sluicing.
