

1. Record Nr.	UNINA9910813802403321
Autore	Mann Uzi
Titolo	Principles of chemical reactor analysis and design : new tools for industrial chemical reactor operations // Uzi Mann
Pubbl/distr/stampa	Hoboken, : Wiley, c2009
ISBN	9780470385821 9780470385814 0470385812
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (xviii, 473 p. : ill.)
Classificazione	571.1 660/.2832
Disciplina	660/.2832
Soggetti	Chemical plants - Equipment and supplies - Design and construction Chemical reactors - Design and construction
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes bibliographical references and index
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- PRINCIPLES OF CHEMICAL REACTOR ANALYSIS AND DESIGN -- CONTENTS -- Preface -- Notation -- 1 Overview of Chemical Reaction Engineering -- 1.1 Classification of Chemical Reactions -- 1.2 Classification of Chemical Reactors -- 1.3 Phenomena and Concepts -- 1.3.1 Stoichiometry -- 1.3.2 Chemical Kinetics -- 1.3.3 Transport Effects -- 1.3.4 Global Rate Expression -- 1.3.5 Species Balance Equation and Reactor Design Equation -- 1.3.6 Energy Balance Equation -- 1.3.7 Momentum Balance Equation -- 1.4 Common Practices -- 1.4.1 Experimental Reactors -- 1.4.2 Selection of Reactor Configuration -- 1.4.3 Selection of Operating Conditions -- 1.4.4 Operational Considerations -- 1.4.5 Scaleup -- 1.4.6 Diagnostic Methods -- 1.5 Industrial Reactors -- 1.6 Summary -- References -- 2 Stoichiometry -- 2.1 Four Contexts of Chemical Reaction -- 2.2 Chemical Formulas and Stoichiometric Coefficients -- 2.3 Extent of a Chemical Reaction -- 2.4 Independent and Dependent Chemical Reactions -- 2.5 Characterization of the Reactor Feed -- 2.5.1 Limiting Reactant -- 2.5.2 Excess Reactant -- 2.6 Characterization of Reactor Performance -- 2.6.1 Reactant Conversion -- 2.6.2 Product Yield and Selectivity -- 2.7 Dimensionless Extents -- 2.8 Independent Species Composition

Specifications -- 2.9 Summary -- Problems -- Bibliography -- 3
Chemical Kinetics -- 3.1 Species Formation Rates -- 3.2 Rates of
Chemical Reactions -- 3.3 Rate Expressions of Chemical Reactions --
3.4 Effects of Transport Phenomena -- 3.5 Characteristic Reaction Time
-- 3.6 Summary -- Problems -- Bibliography -- 4 Species Balances and
Design Equations -- 4.1 Macroscopic Species Balances-General
Species-Based Design Equations -- 4.2 Species-Based Design
Equations of Ideal Reactors -- 4.2.1 Ideal Batch Reactor -- 4.2.2
Continuous Stirred-Tank Reactor (CSTR) -- 4.2.3 Plug-Flow Reactor
(PFR).
4.3 Reaction-Based Design Equations -- 4.3.1 Ideal Batch Reactor --
4.3.2 Plug-Flow Reactor -- 4.3.3 Continuous Stirred-Tank Reactor
(CSTR) -- 4.3.4 Formulation Procedure -- 4.4 Dimensionless Design
Equations and Operating Curves -- 4.5 Summary -- Problems --
Bibliography -- 5 Energy Balances -- 5.1 Review of Thermodynamic
Relations -- 5.1.1 Heat of Reaction -- 5.1.2 Effect of Temperature on
Reaction Equilibrium Constant -- 5.2 Energy Balances -- 5.2.1 Batch
Reactors -- 5.2.2 Flow Reactors -- 5.3 Summary -- Problems --
Bibliography -- 6 Ideal Batch Reactor -- 6.1 Design Equations and
Auxiliary Relations -- 6.2 Isothermal Operations with Single Reactions
-- 6.2.1 Constant-Volume Reactors -- 6.2.2 Gaseous, Variable-Volume
Batch Reactors -- 6.2.3 Determination of the Reaction Rate Expression
-- 6.3 Isothermal Operations with Multiple Reactions -- 6.4
Nonisothermal Operations -- 6.5 Summary -- Problems --
Bibliography -- 7 Plug-Flow Reactor -- 7.1 Design Equations and
Auxiliary Relations -- 7.2 Isothermal Operations with Single Reactions
-- 7.2.1 Design -- 7.2.2 Determination of Reaction Rate Expression --
7.3 Isothermal Operations with Multiple Reactions -- 7.4
Nonisothermal Operations -- 7.5 Effects of Pressure Drop -- 7.6
Summary -- Problems -- 8 Continuous Stirred-Tank Reactor -- 8.1
Design Equations and Auxiliary Relations -- 8.2 Isothermal Operations
with Single Reactions -- 8.2.1 Design of a Single CSTR -- 8.2.2
Determination of the Reaction Rate Expression -- 8.2.3 Cascade of
CSTRs Connected in Series -- 8.3 Isothermal Operations with Multiple
Reactions -- 8.4 Nonisothermal Operations -- 8.5 Summary --
Problems -- 9 Other Reactor Configurations -- 9.1 Semibatch Reactors
-- 9.2 Plug-Flow Reactor with Distributed Feed -- 9.3 Distillation
Reactor -- 9.4 Recycle Reactor -- 9.5 Summary -- Problems -- 10
Economic-Based Optimization.
10.1 Economic-Based Performance Objective Functions -- 10.2 Batch
and Semibatch Reactors -- 10.3 Flow Reactors -- 10.4 Summary --
Problems -- Bibliography -- Appendix A Summary of Key Relationships
-- Appendix B Microscopic Species Balances-Species Continuity
Equations -- Appendix C Summary of Numerical Differentiation and
Integration -- Index.

Sommario/riassunto

An innovative approach that helps students move from the classroom to professional practice This text offers a comprehensive, unified methodology to analyze and design chemical reactors, using a reaction-based design formulation rather than the common species-based design formulation. The book's acclaimed approach addresses the weaknesses of current pedagogy by giving readers the knowledge and tools needed to address the technical challenges they will face in practice. Principles of Chemical Reactor Analysis and Design prepares readers to design and operate real chemical reactors and to troubleshoot any technical problems that may arise. The text's unified methodology is applicable to both single and multiple chemical reactions, to all reactor configurations, and to all forms of rate expression. This text also . . . Describes reactor operations in terms of

dimensionless design equations, generating dimensionless operating curves that depict the progress of individual chemical reactions, the composition of species, and the temperature. Combines all parameters that affect heat transfer into a single dimensionless number that can be estimated a priori. Accounts for all variations in the heat capacity of the reacting fluid. Develops a complete framework for economic-based optimization of reactor operations. Problems at the end of each chapter are categorized by their level of difficulty from one to four, giving readers the opportunity to test and develop their skills. Graduate and advanced undergraduate chemical engineering students will find that this text's unified approach better prepares them for professional practice by teaching them the actual skills needed to design and analyze chemical reactors.
