    Sommario/riassunto   Hamilton focuses on a population of offenders released from prison to
                                halfway houses. Based on assessments administered prior to
                                admission, intervention groups were established using Latent Class
                                Analysis, which identified several classes or "types" of substance
                                abusing offenders. The resulting classification was utilized to assess
                                responsivity among four program orientations: 12-Step, Cognitive-
                                Behavioral, Rehabilitation and Therapeutic Communities. A matching

strategy was then created from class-program interactions. This study is first to examine typology construction as a method for improv
