"This cognitive contrastive study in ten languages (Chinese, Dalabon, English, French, Spanish, Romanian, Kurdish, Khmer, Polish, Tibetan) focuses on the verb give and its syntactic-semantic interface based on six main points, namely argument structure, lexical semantics and event structure, role marking in the three argument construction and in other constructions, lexicalization, grammaticalization and constructionalization of the verb from a cognitive construction grammar point of view (lexicon-grammar continuum), central and extended meanings. We propose that a continuum approach to grammar and lexicon is needed to describe the typological and historical facts. We argue that there is a concrete and abstract transfer 'cluster model' involving coverage of lexical and grammatical extension or bleaching phenomena and that the semantic extensions (metaphorical and otherwise) exploit various portions of this schema. This book, deeply anchored into the Cognitive Construction Grammar theoretical movement, proposes analyses of constructional phenomena which illustrate a grammar to lexicon continuum, in synchrony and diachrony: language change, grammaticalization chains, constructionalization analysis, and an invariant hypothesis of the verb give as a basic verb in human cognition"--

Sommario/riassunto

In Consensual Fictions, Wendy S. Jones focuses on the English novel of the period to explore the relationship between married love, classic liberal thought, and novelistic form.

This monograph presents theoretical methods involving the Hamilton–Jacobi–Bellman formalism in conjunction with set-valued techniques of nonlinear analysis to solve significant problems in dynamics and control. The emphasis is on issues of reachability, feedback control synthesis under complex state constraints, hard or double bounds on controls, and performance in finite time. Guaranteed state estimation, output feedback control, and hybrid dynamics are also discussed. Although the focus is on systems with linear structure, the authors indicate how to apply each approach to nonlinear and nonconvex systems. The main theoretical results lead to computational schemes based on extensions of ellipsoidal calculus that provide complete solutions to the problems. These computational schemes in turn yield software tools that can be applied effectively to high-dimensional systems. Dynamics and Control of Trajectory Tubes: Theory and Computation will interest graduate and senior undergraduate students, as well as researchers and practitioners interested in control theory, its applications, and its computational realizations.
