| 1. Record Nr. | UNINA9910813939403321 |
| Autore | Phadke Arun G |
| Titolo | Computer relaying for power systems // Arun G. Phadke |
| Pubbl/distr/stampa | Hoboken, NJ, : John Wiley & Sons, 2009 |
| ISBN | 0-470-74972-5 1-282-34955-4 9786612349553 0-470-74757-9 |
| Edizione | [2nd ed.] |
| Descrizione fisica | xviii, 326 p. : ill |
| Classificazione | 544.6 621.317 |
| Disciplina | 621.31/7 |
| Soggetti | Electric power systems - Protection - Data processing Protective relays |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Note generali | Includes bibliographies and index |
| Nota di bibliografia | Includes bibliographical references and index. |
| Nota di contenuto | Intro -- Computer Relaying for Power Systems -- Contents -- About the Authors -- Preface to the First Edition -- Preface to the Second Edition -- Glossary of Acronyms -- 1 Introduction to computer relaying -- 1.1 Development of computer relaying -- 1.2 Historical background -- 1.3 Expected benefits of computer relaying -- 1.3.1 Cost -- 1.3.2 Self-checking and reliability -- 1.3.3 System integration and digital environment -- 1.3.4 Functional flexibility and adaptive relaying -- 1.4 Computer relay architecture -- 1.5 Analog to digital converters -- 1.5.1 Successive approximation ADC -- 1.5.2 Delta-sigma ADC -- 1.6 Anti-aliasing filters -- 1.7 Substation computer hierarchy -- 1.8 Summary -- Problems -- References -- 2 Relaying practices -- 2.1 Introduction to protection systems -- 2.2 Functions of a protection system -- 2.3 Protection of transmission lines -- 2.3.1 Overcurrent relays -- 2.3.2 Directional relays -- 2.3.3 Distance relays -- 2.3.4 Phasor diagrams and R-X diagrams -- 2.3.5 Pilot relaying -- 2.4 Transformer, reactor and generator protection -- 2.4.1 Transformer protection -- 2.4.2 Reactor protection -- 2.4.3 Generator protection -- 2.5 Bus protection -- 2.6 Performance of current and voltage transformers -- 2.6.1 Current transformers -- 2.6.2 Voltage |

transformers -- 2.6.3 Electronic current and voltage transformers --
2.7 Summary -- Problems -- References -- 3 Mathematical basis for
protective relaying algorithms -- 3.1 Introduction -- 3.2 Fourier series
-- 3.2.1 Exponential fourier series -- 3.2.2 Sine and cosine fourier
series -- 3.2.3 Phasors -- 3.3 Other orthogonal expansions -- 3.3.1
Walsh functions -- 3.4 Fourier transforms -- 3.4.1 Properties of fourier
transforms -- 3.5 Use of fourier transforms -- 3.5.1 Sampling -- 3.6
Discrete fourier transform -- 3.7 Introduction to probability and
random process.
3.7.1 Random variables and probability distributions -- 3.7.2
Probability distributions and densities -- 3.7.3 Expectation -- 3.7.4
Jointly distributed random variables -- 3.7.5 Independence -- 3.7.6
Linear estimation -- 3.7.7 Weighted least squares -- 3.8 Random
processes -- 3.8.1 Filtering of random processes -- 3.9 Kalman
filtering -- 3.10 Summary -- Problems -- References -- 4 Digital
filters -- 4.1 Introduction -- 4.2 Discrete time systems -- 4.2.1
Operations on discrete time sequences -- 4.2.2 Convolution -- 4.3
Discrete time systems -- 4.4 Z Transforms -- 4.4.1 Power series --
4.4.2 Z Transforms -- 4.4.3 Inverse Z transforms -- 4.4.4 Properties of
Z transforms -- 4.4.5 Discrete time fourier transform -- 4.5 Digital
filters -- 4.6 Windows and windowing -- 4.7 Linear phase -- 4.8
Approximation - filter synthesis -- 4.9 Wavelets -- 4.10 Elements of
artificial intelligence -- 4.10.1 Artificial neural networks -- 4.10.2
Decision trees -- 4.10.3 Agents -- 4.11 Conclusion -- Problems --
References -- 5 Transmission line relaying -- 5.1 Introduction -- 5.2
Sources of error -- 5.3 Relaying as parameter estimation -- 5.3.1
Curve fitting algorithms -- 5.3.2 Fourier algorithms -- 5.3.3 Fourier
algorithms with shorter windows -- 5.3.4 Recursive forms -- 5.3.5
Walsh function algorithms -- 5.3.6 Differential-equation algorithms --
5.3.7 Kalman filter algorithms -- 5.3.8 Removal of the DC offset -- 5.4
Beyond parameter estimation -- 5.4.1 Relay programs based upon fault
classification -- 5.5 Symmetrical component distance relay -- 5.5.1
SCDFT -- 5.5.2 Transient monitor -- 5.5.3 Speed reach considerations
-- 5.5.4 A relaying program -- 5.6 Newer analytic techniques -- 5.6.1
Wavelet applications -- 5.6.2 Agent applications -- 5.7 Protection of
series compensated lines -- 5.8 Summary -- Problems -- References
-- 6 Protection of transformers, machines and buses.
6.1 Introduction -- 6.2 Power transformer algorithms -- 6.2.1 Current
derived restraints -- 6.2.2 Voltage based restraints -- 6.2.3 Flux
restraint -- 6.2.4 A restraint function based on the gap in inrush
current -- 6.3 Generator protection -- 6.3.1 Differential protection of
stator windings -- 6.3.2 Other generator protection functions -- 6.3.3
Sampling rates locked to system frequency -- 6.4 Motor protection --
6.5 Digital bus protection -- 6.6 Summary -- Problems -- References
-- 7 Hardware organization in integrated systems -- 7.1 The nature of
hardware issues -- 7.2 Computers for relaying -- 7.3 The substation
environment -- 7.4 Industry environmental standards -- 7.5
Countermeasures against EMI -- 7.6 Supplementary equipment --
7.6.1 Power supply -- 7.6.2 Auxiliary relays -- 7.6.3 Test switches --
7.6.4 Interface panel -- 7.7 Redundancy and backup -- 7.8 Servicing,
training and maintenance -- 7.9 Summary -- References -- 8 System
relaying and control -- 8.1 Introduction -- 8.2 Measurement of
frequency and phase -- 8.2.1 Least squares estimation of f and df/dt
-- 8.3 Sampling clock synchronization -- 8.4 Application of phasor
measurements to state estimation -- 8.4.1 WLS estimator involving
angle measurements -- 8.4.2 Linear state estimator -- 8.4.3
Partitioned state estimation -- 8.4.4 PMU locations -- 8.5 Phasor
measurements in dynamic state estimation -- 8.5.1 State equation --

8.6 Monitoring -- 8.6.1 Sequence of events analysis -- 8.6.2 Incipient fault detection -- 8.6.3 Breaker health monitoring -- 8.7 Control applications -- 8.8 Summary -- Problems -- References -- 9 Relaying applications of traveling waves -- 9.1 Introduction -- 9.2 Traveling waves on single-phase lines -- 9.3 Traveling waves on three-phase lines -- 9.3.1 Traveling waves due to faults -- 9.4 Directional wave relay -- 9.5 Traveling wave distance relay. 9.6 Differential relaying with phasors -- 9.7 Traveling wave differential relays -- 9.8 Fault location -- 9.8.1 Impedance estimation based fault location -- 9.8.2 Fault location based on traveling waves -- 9.9 Other recent developments -- 9.10 Summary -- Problems -- References -- 10 Wide area measurement applications -- 10.1 Introduction -- 10.2 Adaptive relaying -- 10.3 Examples of adaptive relaying -- 10.3.1 Transmission line protection -- 10.3.2 Transformer protection -- 10.3.3 Reclosing -- 10.4 Wide area measurement systems (WAMS) -- 10.5 WAMS architecture -- 10.6 WAMS based protection concepts -- 10.6.1 Adaptive dependability and security -- 10.6.2 Monitoring approach of apparent impedances towards relay characteristics -- 10.6.3 WAMS based out-of-step relaying -- 10.6.4 Supervision of backup zones -- 10.6.5 Intelligent load shedding -- 10.6.6 Adaptive loss-of-field -- 10.6.7 Intelligent islanding -- 10.6.8 System wide integration of SIPS -- 10.6.9 Load shedding and restoration -- 10.7 Summary -- Problems -- References -- Appendix A -- Representative system data -- Transmission lines -- Transformers -- Generators -- Power system -- References -- Appendix B -- Standard sampling rates -- References -- Appendix C -- Conversion between different sampling rates -- References -- Appendix D -- Standard for transient data exchange -- References -- Index.

Sommario/riassunto

"The book will interest both students and professionals. While technical, the book is well-written." (Book News, December 2009).
