

1. Record Nr.	UNINA9910814412803321
Autore	Ismail Muhammad <1985 November 20->
Titolo	Green heterogeneous wireless networks // Muhammad Ismail, Texas A&M University at Qatar, Doha, Qatar, Muhammad Zeeshan Shakir, University of the West of Scotland, Glasgow, UK, Khalid Qaraqe, Texas A&M University at Qatar, Doha, Qatar, Erchin Serpedin, Texas A&M University, College Station, Texas, USA
Pubbl/distr/stampa	Chichester, West Sussex, UK : , : Wiley, IEEE Press, , 2016 [Piscataway, New Jersey] : , : IEEE Xplore, , [2016]
ISBN	1-119-08803-8 1-119-08802-X 1-119-08804-6
Descrizione fisica	1 online resource (275 p.)
Collana	Wiley - IEEE
Disciplina	004.68
Soggetti	Wireless LANs - Energy consumption Heterogeneous computing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	-- Preface xi -- Acknowledgements xiii -- Dedication xv -- Part I INTRODUCTION TO GREEN NETWORKS -- 1 Green Network Fundamentals 3 -- 1.1 Introduction: Need for Green Networks 3 -- 1.2 Traffic Models 5 -- 1.2.1 Traffic Spatial Fluctuation Modelling 6 -- 1.2.2 Traffic Temporal Fluctuation Modelling 8 -- 1.3 Energy Efficiency and Consumption Models in Wireless Networks 9 -- 1.3.1 Throughput Models 9 -- 1.3.2 Power Consumption Models 10 -- 1.3.3 Energy Efficiency and Consumption Models 19 -- 1.4 Performance Trade-Offs 23 -- 1.4.1 Network-side Trade-Offs 24 -- 1.4.2 Mobile User Trade-Offs 26 -- 1.5 Summary 28 -- 2 Green Network Solutions 29 -- 2.1 Green Solutions and Analytical Models at Low and/or Bursty Call Traffic Loads 29 -- 2.1.1 Dynamic Planning 29 -- 2.1.2 MT Radio Interface Sleep Scheduling 34 -- 2.1.3 Discussion 37 -- 2.2 Green Solutions and Analytical Models at High and/or Continuous Call Traffic Loads 38 -- 2.2.1 Scheduling for Single-Network Access 38 -- 2.2.2 Scheduling for Multi-Homing Access 41 -- 2.2.3 Scheduling with Small-Cells 41 --

2.2.4 Relaying and Device-to-Device Communications	42
2.2.5 Scheduling with Multiple Energy Sources	45
2.2.6 Discussion	47
2.3 Green Projects and Standards	48
2.4 Road Ahead	49
2.5 Summary	52
Part II MULTI-HOMING RESOURCE ALLOCATION	55
3 Green Multi-homing Approach	55
3.1 Heterogeneous Wireless Medium	55
3.1.1 Wireless Networks	56
3.1.2 Mobile Terminals	57
3.1.3 Radio Resources and Propagation Attenuation	57
3.2 Green Multi-homing Resource Allocation	58
3.3 Challenging Issues	60
3.3.1 Single-User versus Multiuser System	60
3.3.2 Single-Operator versus Multioperator System	60
3.3.3 Fairness	61
3.3.4 Centralized versus Decentralized Implementation	61
3.3.5 In-device Coexistence Interference	62
3.3.6 Computational Complexity	66
3.3.7 Number of MT Radio Interfaces versus Number of Available Networks	67
3.4 Summary	69
4 Multi-homing for a Green Downlink	70
4.1 Introduction	70
4.2 Win / Win Cooperative Green Resource Allocation	72
4.2.1 Non-cooperative Single-Network Solution	73
4.2.2 Win / Win Cooperative Solution	75
4.2.3 Benchmark: Sum Minimization Solution	81
4.2.4 Performance Evaluation	81
4.3 IDC Interference-Aware Green Resource Allocation	86
4.3.1 IDC Interference-Aware Resource Allocation Design	87
4.3.2 Performance Evaluation	90
4.4 Summary	93
5 Multi-homing for a Green Uplink	94
5.1 Introduction	94
5.2 Green Multi-homing Uplink Resource Allocation for Data Calls	95
5.2.1 Optimal Green Uplink Radio Resource Allocation with QoS Guarantee	97
5.2.2 Suboptimal Uplink Energy-Efficient Radio Resource Allocation	102
5.2.3 Performance Evaluation	104
5.3 Green Multi-homing Uplink Resource Allocation for Video Calls	107
5.3.1 Energy Management Sub-system Design	109
5.3.2 Performance Evaluation	114
5.4 Summary	117
6 Radio Frequency and Visible Light Communication Internetworking	119
6.1 Introduction	119
6.2 VLC Fundamentals	120
6.2.1 VLC Transceivers	120
6.2.2 VLC Channel	122
6.2.3 Interference Issues in VLC	124
6.2.4 VLC / RF Internetworking	126
6.3 Green RF / VLC Internetworking	128
6.3.1 Energy Efficiency Maximization	129
6.3.2 Performance Evaluation	133
6.3.3 Green VLC / RF Internetworking Challenging Issues	137
6.4 Summary	138
Part III NETWORK MANAGEMENT SOLUTIONS	141
7 Dynamic Planning in Green Networks	141
7.1 Introduction	141
7.2 Dynamic Planning with Dense Small-Cell Deployment	142
7.2.1 Energy-Efficient and QoS-Aware Cell Zooming	144
7.2.2 Performance Evaluation	145
7.3 Dynamic Planning with Cooperative Networking	148
7.3.1 Optimal Resource On / Off Switching Framework	150
7.3.2 Performance Evaluation	152
7.4 Balanced Dynamic Planning Approach	154
7.4.1 Two-Timescale Approach	157
7.4.2 Performance Evaluation	162
7.5 Summary	164
8 Greening the Cell Edges	166
8.1 Introduction	166
8.1.1 Why Cell-on-Edge Deployment?	167
8.1.2 Background Work	168
8.2 Two-Tier Small-Cell-on-Edge Deployment	169
8.2.1 Network Layout	169
8.2.2 Bandwidth Partition and Channel Allocation	170
8.2.3 Mobile User Distribution	171
8.3 Energy-Aware Transmission Design	171
8.3.1 Path-Loss Model for Strong LOS Conditions	171
8.3.2 Composite Fading Channel for Strong LOS Conditions	172
8.4 Area Spectral Efficiency of HetNets	173
8.5 Analytical Bounds on ASE of HetNets	176
8.5.1 Mean Achievable Capacity Based on MGF Approach	176
8.5.2 Assumptions to Derive Upper and Lower Bounds	177
8.5.3 Analytical Bounds on the Capacity of Macro-cell Network	179
8.5.4 Analytical Bounds on the Capacity of Small-Cell Networks	180
8.6 Analytical Bounds on ASE over Generalized-K Fading Channel	181
8.7 Energy	

Analysis of HetNets 183 -- 8.7.1 Energy Consumption of Two-Tier
HetNets 184 -- 8.7.2 Energy Savings of Two-Tier HetNets 184 -- 8.8
Ecology and Economics of HetNets 185 -- 8.8.1 CO₂e Emissions and
Reduction in CO₂e Emissions 186 -- 8.8.2 Daily CO₂e Emissions Profile
186 -- 8.8.3 Low-Carbon Economy 186 -- 8.9 Summary 188 --
Appendix A - Simulation Parameters 189 -- Appendix B - Proof of
(8.38) 189 -- 9 D2D Communications in Hierarchical HetNets 191 --
9.1 Introduction 191 -- 9.2 Modelling Hierarchical Heterogeneous
Networks 192 -- 9.2.1 Network Architecture 193 -- 9.2.2 D2D User
Density in Hierarchical HetNets 194 -- 9.2.3 Spectrum Partitioning in
Hierarchical HetNets 196 -- 9.2.4 Power Control over D2D Links 196 --
9.3 Spectral Efficiency Analysis 197 -- 9.3.1 Traditional HetNet 197 --
9.3.2 Hierarchical HetNet 198 -- 9.4 Average User Transmission Power
Analysis 200 -- 9.4.1 Discussion on Transmission Power Analysis of
D2D Users 202 -- 9.5 Backhaul Energy Analysis 204 -- 9.5.1 Backhaul
Power Consumption 204 -- 9.5.2 Backhaul Energy Efficiency 205 --
9.5.3 Considerations on Backhaul Energy Efficiency of Hierarchical
HetNet 206 -- 9.6 Summary 208 -- Appendix A 209 -- Appendix B -
Simulation Parameters 210.
10 Emerging Device-Centric Communications 211 -- 10.1 Introduction
211 -- 10.2 Emerging Device-Centric Paradigms 212 -- 10.2.1 Device-
to-Device Communication Management 213 -- 10.2.2 Device-to-
Device Communication Architecture 213 -- 10.2.3 Device-to-Device
Communication Challenges 214 -- 10.3 Devices-to-Device
Communications 214 -- 10.3.1 System Model 214 -- 10.4 Optimal
Selection of Source Devices and Radio Interfaces 216 -- 10.4.1 Device
Selection Criteria 217 -- 10.4.2 Ascending Proxy Auction for Device
Selection 218 -- 10.4.3 Discussions on Device and Radio Interface
Selection 219 -- 10.5 Optimal Packet Split among Devices 221 -- 10.6
Green Analysis of Mobile Devices 224 -- 10.6.1 Energy Consumption of
Mobile Devices 225 -- 10.6.2 Electricity Cost for Mobile Charging 226
-- 10.6.3 Battery Life of Mobile Devices 227 -- 10.7 Some Challenges
and Future Directions 228 -- 10.7.1 Centralized Ds2D Set-up 228 --
10.7.2 Decentralized Ds2D Set-up 228 -- 10.8 Summary 229 --
References 230 -- Index 245.
