| Sommario/riassunto      | Deconstructing Prehumanity is an investigation into the role of archaeological perception in the construction of race. It explores how social knowledge and disciplinary subjectivity have shaped our organization of the human past and how this organization and its lexicon have fueled racialism.                                                                                                                                           |
