Sommario/riassunto	By establishing a dialogue in which the meditative practices of Buddhism and Christianity speak to the theories of modern philosophy and science, B. Alan Wallace reveals the theoretical similarities underlying these disparate disciplines and their unified approach to making sense of the objective world. Wallace begins by exploring the relationship between Christian and Buddhist meditative practices. He outlines a sequence of meditations the reader can undertake, showing that, though Buddhism and Christianity differ in their belief systems, their methods of cognitive inquiry provide similar ins

Sommario/riassunto	This work is the first comprehensive description of Sumerian constructions involving a copula. Using around 400 fully glossed examples, it gives a thorough analysis of all uses of the copula, which is one of the least understood and most frequently misinterpreted and

consequently mistranslated morphemes in Sumerian. It starts with a concise introduction into the grammatical structure of Sumerian, followed by a study that is accessible to both linguists and sumerologists, as it applies the terminology of modern descriptive linguistics. It provides the oldest known and documented example of the path of grammaticalization that leads from a copula to a focus marker. It gives the description of Sumerian copular paratactic relative clauses, which make use of an otherwise only scarcely attested relativization strategy. At the end of the book, the reader will have a clear picture about the morphological and syntactic devices used to mark identificational, polarity and sentence focus in Sumerian, one of the oldest documented languages in the world.
