1.	Record Nr.	UNINA9910814895303321
	Autore	Gaumont Damien
	Titolo	Equilibrium wage dispersion : an example / / prepared by Damien Gaumont, Martin Schindler, and Randall Wright
	Pubbl/distr/stampa	[Washington, D.C.], : International Monetary Fund, Research Dept., 2006
	ISBN	1-4623-8311-4
		1-4527-4208-1
		1-283-51891-0
		1-4519-0815-6
		9786613831361
	Edizione	[1st ed.]
	Descrizione fisica	1 online resource (16 p.)
	Collana	IMF working paper ; ; WP/06/19
	Altri autori (Persone)	SchindlerMartin <1971->
		WrightRandall <1956->
	Soggetti	Equilibrium (Economics) - Econometric models
		Wages - Econometric models
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	"January 2006."
	Nota di bibliografia	Includes bibliographical references.
	Nota di contenuto	""Contents""; ""I. Introduction""; ""II. The Model""; ""III. The Example""; ""IV. Conclusion""; ""References""
	Sommario/riassunto	Search models with posting and match-specific heterogeneity generate wage dispersion. Given K values for the match-specific variable, it is known that there are K reservation wages that could be posted, but generically never more than two actually are posted in equilibrium. What is unknown is when we get two wages, and which wages are actually posted. For an example with K = 3, we show equilibrium is unique; may have one wage or two; and when there are two, the equilibrium can display any combination of posted reservation wages, depending on parameters. We also show how wages, profits, and unemployment depend on productivity.
