

1. Record Nr.	UNINA9910815169603321
Autore	Pan C. T.
Titolo	Design and fabrication of self-powered micro-harvesters : rotating and vibrated micro-power systems // C.T. Pan, Y.M. Hwang, Liwei Lin, and Ying-Chung Chen
Pubbl/distr/stampa	Singapore : , : Wiley, IEEE, , 2014 [Piscataqay, New Jersey] : , : IEEE Xplore, , [2014]
ISBN	1-118-48782-6 1-118-48781-8 1-306-63896-8
Descrizione fisica	1 online resource (269 p.)
Disciplina	621.31/3
Soggetti	Microharvesters (Microelectronics) Piezoelectric transducers Electric machinery - Rotors
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Machine generated contents note: About the Authors xi Preface xiii Acknowledgments xv 1 Introduction 1 1.1 Background 1 1.2 Energy Harvesters 2 1.2.1 Piezoelectric ZnO Energy Harvester 3 1.2.2 Vibrational Electromagnetic Generators 3 1.2.3 Rotary Electromagnetic Generators 4 1.2.4 NFES Piezoelectric PVDF Energy Harvester 4 1.3 Overview 5 2 Design and Fabrication of Flexible Piezoelectric Generators Based on ZnO Thin Films 7 2.1 Introduction 7 2.2 Characterization and Theoretical Analysis of Flexible ZnO-Based Piezoelectric Harvesters 10 2.2.1 Vibration Energy Conversion Model of Film-Based Flexible Piezoelectric Energy Harvester 10 2.2.2 Piezoelectricity and Polarity Test of Piezoelectric ZnO Thin Film 12 2.2.3 Optimal Thickness of PET Substrate 15 2.2.4 Model Solution of Cantilever Plate Equation 15 2.2.5 Vibration-Induced Electric Potential and Electric Power 18 2.2.6 Static Analysis to Calculate the Optimal Thickness of the PET Substrate 19 2.2.7 Model Analysis and Harmonic Analysis 21 2.2.8 Results of Model Analysis and Harmonic Analysis 23 2.3 The Fabrication of Flexible Piezoelectric ZnO Harvesters on PET

Substrates	27
2.3.1 Bonding Process to Fabricate UV-Curable Resin Lump Structures on PET Substrates	27
2.3.2 Near-Field Electro-Spinning with Stereolithography Technique to Directly Write 3D UV-Curable Resin Patterns on PET Substrates	29
2.3.3 Sputtering of Al and ITO Conductive Thin Films on PET Substrates	29
2.3.4 Deposition of Piezoelectric ZnO Thin Films by Using RF Magnetron Sputtering	31
2.3.5 Testing a Single Energy Harvester under Resonant and Non-Resonant Conditions	34
2.3.6 Application of ZnO/PET-Based Generator to Flash Signal LED Module	39
2.3.7 Design and Performance of a Broad Bandwidth Energy Harvesting System	40
2.4 Fabrication and Performance of Flexible ZnO/SUS304-Based Piezoelectric Generators	48
2.4.1 Deposition of Piezoelectric ZnO Thin Films on Stainless Steel Substrates	48
2.4.2 Single-Sided ZnO/SUS304-Based Flexible Piezoelectric Generator	50
2.4.3 Double-Sided ZnO/SUS304-Based Flexible Piezoelectric Generator	51
2.4.4 Characterization of ZnO/SUS304-Based Flexible Piezoelectric Generators	52
2.4.5 Structural and Morphological Properties of Piezoelectric ZnO Thin Films on Stainless Steel Substrates	54
2.4.6 Analysis of Adhesion of ZnO Thin Films on Stainless Steel Substrates	56
2.4.7 Electrical Properties of Single-Sided ZnO/SUS304-Based Flexible Piezoelectric Generator	59
2.4.8 Characterization of Double-Sided ZnO/SUS304-Based Flexible Piezoelectric Generator: Analysis and Modification of Back Surface of SUS304	61
2.4.9 Electrical Properties of Double-Sided ZnO/SUS304-Based Piezoelectric Generator	63
2.5 Summary	66
References	67
3 Design and Fabrication of Vibration-Induced Electromagnetic Microgenerators	71
3.1 Introduction	71
3.2 Comparisons between MCTG and SMTG	74
3.2.1 Magnetic Core-Type Generator (MCTG)	74
3.2.2 Sided Magnet-Type Generator (SMTG)	76
3.3 Analysis of Electromagnetic Vibration-Induced Microgenerators	76
3.3.1 Design of Electromagnetic Vibration-Induced Microgenerators	77
3.3.2 Analysis Mode of the Microvibration Structure	78
3.3.3 Analysis Mode of Magnetic Field	81
3.3.4 Evaluation of Various Parameters of Power Output	84
3.4 Analytical Results and Discussion	88
3.4.1 Analysis of Bending Stress within the Supporting Beam of the Spiral Microspring	90
3.4.2 Finite Element Models for Magnetic Density Distribution	93
3.4.3 Power Output Evaluation	97
3.5 Fabrication of Microcoil for Microgenerator	103
3.5.1 Microspring and Induction Coil	103
3.5.2 Microspring and Magnet	105
3.6 Tests and Experiments	106
3.6.1 Measurement System	106
3.6.2 Measurement Results and Discussion	107
3.6.3 Comparison between Measured Results and Analytical Values	110
3.7 Conclusions	112
3.7.1 Analysis of Microgenerators and Vibration Mode and Simulation of the Magnetic Field	112
3.7.2 Fabrication of LTCC Microsensor	112
3.7.3 Measurement and Analysis Results	113
3.8 Summary	113
References	114
4 Design and Fabrication of Rotary Electromagnetic Microgenerator	117
4.1 Introduction	117
4.1.1 Piezoelectric, Thermoelectric, and Electrostatic Generators	119
4.1.2 Vibrational Electromagnetic Generators	119
4.1.3 Rotary Electromagnetic Generators	120
4.1.4 Generator Processes	121
4.1.5 Lithographie Galvanoformung Abformung Process	122
4.1.6 Winding Processes	123
4.1.7 LTCC	123
4.1.8 Printed Circuit Board Processes	124
4.1.9 Finite-Element Simulation and Analytical Solutions	126
4.2 Case 1: Winding Generator	126
4.2.1 Design	127
4.2.2 Analytical Formulation	132
4.2.3 Simulation	134
4.2.4 Fabrication Process	138
4.2.5 Results and Discussion (1)	139
4.2.6 Results and Discussion (2)	142
4.3 Case 2: LTCC Generator	146
4.3.1 Simulation	147
4.3.2 Analytical Theorem of Microgenerator Electromagnetism	148
4.3.3 Simplification	152
4.3.4 Analysis of Vector Magnetic Potential	153
4.3.5 Analytical Solutions for Power Generation	154
4.4 Fabrication	157

Sommario/riassunto

"Presents the latest methods for designing and fabricating self-powered micro-generators and energy harvester systems. Design and Fabrication of Self-Powered Micro-Harvesters introduces the latest trends of self-powered generators and energy harvester systems, including the design, analysis and fabrication of micro power systems. Presented in four distinct parts, the authors explore the design and fabrication of: vibration-induced electromagnetic micro-generators; rotary electromagnetic micro-generators; flexible piezo-micro-generator with various widths; and PVDF electrospun piezo-energy with interdigital electrode. Focusing on the latest developments of self-powered microgenerators such as micro rotary with LTCC and filament winding method, flexible substrate, and piezo fiber-typed microgenerator with sound organization, the fabrication processes involved in MEMS and nanotechnology are introduced chapter by chapter. In addition, analytical solutions are developed for each generator to help the reader to understand the fundamentals of physical phenomena. Fully illustrated throughout and of a high technical specification, it is written in an accessible style to provide an essential reference for industry and academic researchers. Comprehensive treatment of the newer harvesting devices including vibration-induced and rotary electromagnetic microgenerators, polyvinylidene fluoride (PVDF) nanoscale/microscale fiber, and piezo-micro-generators. Presents innovative technologies including LTCC (low temperature co-fired ceramic) processes, and PCB (printed circuit board) processes. Offers interdisciplinary interest in MEMS/NEMS technologies, green energy applications, bio-related sensors, actuators and generators. Presented in a readable style describing the fundamentals, applications and explanations of micro-harvesters, with full illustration
