1. Record Nr. UNINA9910815966903321

Autore	Lovelace Mary
Titolo	Managing disk subsystems using IBM totalstorage productivity center / / Mary Lovelace et al
Pubbl/distr/stampa	San Jose, CA, : IBM, 2005
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (554 p.)
Collana	IBM redbooks
Altri autori (Persone)	BamfordJason FerencDariusz VazeMadhav
Soggetti	Data recovery (Computer science) Storage area networks (Computer networks)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"September 2005."
Nota di bibliografia	Includes bibliographical references (p. 527-528) and index.
Nota di contenuto	Front cover -- Contents -- Notices -- Trademarks -- Preface -- The team that wrote this redbook -- Become a published author -- Comments welcome -- Chapter 1. IBM TotalStorage Productivity Center overview -- 1.1 Introduction to IBM TotalStorage Productivity Center -- 1.1.1 Standards organizations and standards -- 1.2 IBM TotalStorage Open Software family -- 1.3 IBM TotalStorage Productivity Center -- 1.3.1 Data subject matter expert: TotalStorage Productivity Center for Data -- 1.3.2 Fabric subject matter expert: Productivity Center for Fabric -- 1.3.3 Disk subject matter expert: TotalStorage Productivity Center for Disk -- 1.3.4 Replication subject matter expert: Productivity Center for Replication -- 1.4 IBM TotalStorage Productivity Center -- 1.4.1 Productivity Center for Disk and Productivity Center for Replication -- 1.4.2 Event services -- 1.5 Taking steps toward an On Demand environment -- Chapter 2. Key concepts -- 2.1 Standards organizations and standards -- 2.1.1 CIM/WEB management model -- 2.2 Storage Networking Industry Association -- 2.2.1 The SNIA Shared Storage Model -- 2.2.2 SMI Specification -- 2.2.3 Integrating existing devices into the CIM model -- 2.2.4 CIM Agent implementation -- 2.2.5 CIM Object Manager -- 2.3 Common Information Model (CIM) -- 2.3.1 How the CIM Agent works -- 2.4 Service Location Protocol (SLP) -- 2.4.1 SLP architecture -- 2.4.2 SLP service agent -- 2.4.3 SLP user

agent -- 2.4.4 SLP directory agent -- 2.4.5 Why use an SLP DA? -- 2.4.6 When to use DAs -- 2.4.7 SLP configuration recommendation -- 2.4.8 Setting up the Service Location Protocol Directory Agent -- 2.4.9 Configuring SLP Directory Agent addresses -- 2.5 Productivity Center for Disk and Replication architecture -- Chapter 3. TotalStorage Productivity Center suite installation -- 3.1 Installing the IBM TotalStorage Productivity Center.
3.1.1 Configurations -- 3.1.2 Installation prerequisites -- 3.1.3 TCP/IP ports used by TotalStorage Productivity Center -- 3.1.4 Default databases created during install -- 3.2 Pre-installation check list -- 3.2.1 User IDs and security -- 3.2.2 Certificates and key files -- 3.3 Services and service accounts -- 3.3.1 Starting and stopping the managers -- 3.3.2 Uninstall Internet Information Services -- 3.3.3 SNMP install -- 3.4 IBM TotalStorage Productivity Center for Fabric -- 3.4.1 The computer name -- 3.4.2 Database considerations -- 3.4.3 Windows Terminal Services -- 3.4.4 Tivoli NetView -- 3.4.5 Personal firewall -- 3.4.6 Change the HOSTS file -- 3.5 Installation process -- 3.5.1 Prerequisite product install: DB2 and WebSphere -- 3.5.2 Installing IBM Director -- 3.5.3 Tivoli Agent Manager -- 3.5.4 IBM TotalStorage Productivity Center for Disk and Replication Base -- 3.5.5 IBM TotalStorage Productivity Center for Disk -- 3.5.6 IBM TotalStorage Productivity Center for Replication -- 3.5.7 IBM TotalStorage Productivity Center for Fabric -- Chapter 4. CIMOM installation and configuration -- 4.1 Introduction -- 4.2 Planning considerations for Service Location Protocol -- 4.2.1 Considerations for using SLP DAs -- 4.2.2 SLP configuration recommendation -- 4.3 General performance guidelines -- 4.4 Planning considerations for CIMOM -- 4.4.1 CIMOM configuration recommendations -- 4.5 Installing CIM agent for ESS -- 4.5.1 ESS CLI install -- 4.5.2 ESS CIM Agent install -- 4.5.3 Post Installation tasks -- 4.6 Configuring the ESS CIM Agent for Windows -- 4.6.1 Registering ESS Devices -- 4.6.2 Register ESS server for Copy services -- 4.6.3 Restart the CIMOM -- 4.6.4 CIMOM User Authentication -- 4.7 Verifying connection to the ESS -- 4.7.1 Problem determination -- 4.7.2 Confirming the ESS CIMOM is available.
4.7.3 Setting up the Service Location Protocol Directory Agent -- 4.7.4 Configuring IBM Director for SLP discovery -- 4.7.5 Registering the ESS CIM Agent to SLP -- 4.7.6 Verifying and managing CIMOMs availability -- 4.8 Installing CIM agent for IBM DS4000 family -- 4.8.1 Verifying and Managing CIMOM availability -- 4.9 Configuring CIMOM for SAN Volume Controller -- 4.9.1 Adding the SVC TotalStorage Productivity Center for Disk user account -- 4.9.2 Registering the SAN Volume Controller host in SLP -- 4.10 Configuring CIMOM for TotalStorage Productivity Center for Disk summary -- 4.10.1 SLP registration and slptool -- 4.10.2 Persistency of SLP registration -- 4.10.3 Configuring slp.reg file -- Chapter 5. TotalStorage Productivity Center common base use -- 5.1 Productivity Center common base: Introduction -- 5.2 Launching TotalStorage Productivity Center -- 5.3 Exploiting Productivity Center common base -- 5.3.1 Configure MDM -- 5.3.2 Launch Device Manager -- 5.3.3 Discovering new storage devices -- 5.3.4 Manage CIMOMs -- 5.3.5 Manually removing old CIMOM entries -- 5.4 Performing volume inventory -- 5.5 Working with ESS -- 5.5.1 Changing the display name of an ESS -- 5.5.2 ESS Volume inventory -- 5.5.3 Assigning and unassigning ESS volumes -- 5.5.4 Creating new ESS volumes -- 5.5.5 Launch device manager for an ESS device -- 5.6 Working with SAN Volume Controller -- 5.6.1 Changing the display name of a SAN Volume Controller -- 5.6.2 Working with SAN Volume Controller mdisks -- 5.6.3 Creating new Mdisks on supported storage devices -- 5.6.4 Create and view SAN Volume Controller Vdisks -- 5.7

Working with DS4000 family or FAStT storage -- 5.7.1 Changing the display name of a DS4000 or FAStT -- 5.7.2 Working with DS4000 or FAStT volumes -- 5.7.3 Creating DS4000 or FAStT volumes -- 5.7.4 Assigning hosts to DS4000 and FAStT volumes.
5.7.5 Unassigning hosts from DS4000 or FAStT volumes -- 5.8 Event Action Plan Builder -- 5.8.1 Applying an Event Action Plan to a managed system or group -- 5.8.2 Exporting and importing Event Action Plans -- Chapter 6. TotalStorage Productivity Center for Disk use -- 6.1 Performance Manager GUI -- 6.2 Exploiting Performance Manager -- 6.2.1 Performance Manager data collection -- 6.2.2 Using IBM Director Scheduler function -- 6.2.3 Reviewing Data collection task status -- 6.2.4 Managing Performance Manager Database -- 6.2.5 Performance Manager gauges -- 6.2.6 ESS thresholds -- 6.2.7 Data collection for SAN Volume Controller -- 6.2.8 SAN Volume Controller thresholds -- 6.3 Exploiting gauges -- 6.3.1 Before you begin -- 6.3.2 Creating gauges example -- 6.3.3 Zooming in on the specific time period -- 6.3.4 Modify gauge to view array level metrics -- 6.3.5 Modify gauge to review multiple metrics in same chart -- 6.4 Performance Manager command line interface -- 6.4.1 Performance Manager CLI commands -- 6.4.2 Sample command outputs -- 6.5 Volume Performance Advisor (VPA) -- 6.5.1 VPA introduction -- 6.5.2 The provisioning challenge -- 6.5.3 Workload characterization and workload profiles -- 6.5.4 Workload profile values -- 6.5.5 How the Volume Performance Advisor makes decisions -- 6.5.6 Enabling the Trace Logging for Director GUI Interface -- 6.6 Getting started -- 6.6.1 Workload profiles -- 6.6.2 Using VPA with predefined Workload profile -- 6.6.3 Launching VPA tool -- 6.6.4 ESS User Validation -- 6.6.5 Configuring VPA settings for the ESS diskspace request -- 6.6.6 Choosing Workload Profile -- 6.6.7 Choosing candidate locations -- 6.6.8 Verify settings for VPA -- 6.6.9 Approve recommendations -- 6.6.10 VPA loopback after Implement Recommendations selected -- 6.7 Creating and managing Workload Profiles -- 6.7.1 Choosing Workload Profiles.
6.8 Remote Console installation for TotalStorage Productivity Center for Disk - Performance Manager -- 6.8.1 Installing IBM Director Console -- 6.8.2 Installing TotalStorage Productivity Center for Disk Base Remote Console -- 6.8.3 Installing Remote Console for Performance Manager function -- 6.8.4 Launching Remote Console for TotalStorage Productivity Center -- Chapter 7. TotalStorage Productivity Center for Fabric use -- 7.1 TotalStorage Productivity Center for Fabric overview -- 7.1.1 Zoning overview -- 7.1.2 Supported switches for zoning -- 7.1.3 Deployment -- 7.1.4 Enabling zone control -- 7.1.5 TotalStorage Productivity Center for Disk eFix -- 7.1.6 Installing the eFix -- 7.2 Installing Fabric remote console -- 7.3 TotalStorage Productivity Center for Disk integration -- 7.4 Launching TotalStorage Productivity Center for Fabric -- Chapter 8. TotalStorage Productivity Center for Replication use -- 8.1 TotalStorage Productivity Center for Replication overview -- 8.1.1 Supported Copy Services -- 8.1.2 Replication session -- 8.1.3 Storage group -- 8.1.4 Storage pools -- 8.1.5 Relationship of group, pool, and session -- 8.1.6 Copyset and sequence concepts -- 8.2 Exploiting TotalStorage Productivity Center for Replication -- 8.2.1 Before you start -- 8.2.2 Creating a storage group -- 8.2.3 Modifying a storage group -- 8.2.4 Viewing storage group properties -- 8.2.5 Deleting a storage group -- 8.2.6 Creating a storage pool -- 8.2.7 Modifying a storage pool -- 8.2.8 Deleting a storage pool -- 8.2.9 Viewing storage pool properties -- 8.2.10 Storage paths -- 8.2.11 Point-in-Time Copy: Creating a session -- 8.2.12 Creating a session: Verifying source-target relationship -- 8.2.13 Continuous Synchronous

Remote Copy: Creating a session -- 8.2.14 Managing a Point-in-Time copy -- 8.2.15 Managing a Continuous Synchronous Remote Copy. 8.3 Using Command Line Interface (CLI) for replication.

Sommario/riassunto

IBM TotalStorage Productivity Center is designed to provide a single point of control for managing networked storage devices that implement the Storage Management Initiative Specification (SMI-S), including the IBM TotalStorage SAN Volume Controller, Enterprise Storage Server, and FAStT. TotalStorage Productivity Center includes the IBM Tivoli Bonus Pack for SAN Management, bringing together device management with fabric management, to help enable the storage administrator to manage the Storage Area Network from a central point. The storage administrator has the ability to configure storage devices, manage the devices, and view the Storage Area Network from a single point. This software offering is intended to complement other members of the IBM TotalStorage Virtualization family by simplifying and consolidating storage management activities. This IBM Redbooks publication includes an introduction to the TotalStorage Productivity Center and its components. It provides detailed information about the installation and configuration of TotalStorage Productivity Center for Disk and TotalStorage Productivity Center for Replication and how to use them. It is intended for anyone wanting to learn about TotalStorage Productivity Center and how it complements an on demand environment and for those planning to install and use the product.
