Sommario/riassunto

The objective of this study is to depict the energy environment regarding the various sources of energy, the correlation of energy mixes, various trends of transition and mainly corruption of these preceding aspects. An insight of successful and failing countermeasures is also provided. The term corruption in an economic environment is defined as fraud, bribery, immorality and misuse of power, however the actual scope is greater, as the interdependencies of nations, economies and their corresponding interactions create disruptions and discrepancies - especially when lobbying is exploited.
