1. Record Nr. UNINA9910816260403321

Titolo	Nanotechnology in eco-efficient construction / / edited by F. Pacheco-Torgal [and three others]
Pubbl/distr/stampa	Cambridge : , : Woodhead Publishing, , 2013
ISBN	0-85709-883-7
Edizione	[1st edition]
Descrizione fisica	1 online resource (xiii, 443 pages, 2 unnumbered pages of plates) : illustrations (some color)
Collana	Woodhead Publishing Series in Civil and Structural Engineering
Classificazione	BAU 300f
Disciplina	690.0286
Soggetti	Nanostructured materials - Environmental aspects Nanostructured materials - Industrial applications Construction industry - Environmental aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	part I. Infrastructural applications -- part II. Applications for building energy efficiency -- part III. Photocatalytic applications.
Sommario/riassunto	As the environmental impact of existing construction and building materials comes under increasing scrutiny, the search for more eco-efficient solutions has intensified. Nanotechnology offers great potential in this area and is already being widely used to great success. Nanotechnology in eco-efficient construction is an authoritative guide to the role of nanotechnology in the development of eco-efficient construction materials and sustainable construction.Following an introduction to the use of nanotechnology in eco-efficient construction materials, part one considers such infrastruct
