1. Record Nr. UNINA9910816293103321

Autore	Yang Guang
Titolo	Bioinspired materials science and engineering / / edited by Guang Yang, Lin Xiao and Lallepak Lamboni
Pubbl/distr/stampa	Hoboken, NJ : , : Wiley, , 2018
ISBN	1-119-39034-6 1-119-39035-4 1-119-39033-8
Edizione	[First edition.]
Descrizione fisica	1 online resource (412 pages)
Disciplina	610.28
Soggetti	Biomimetics Materials - Biotechnology Materials science Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction to Science and Engineering Principles for the Development of Bioinspired Materials / Muhammad Wajid Ullah, Zhijun Shi, Sehrish Manan, Guang Yang -- Biofabrication. Biotemplating Principles / Cordt Zollfrank, Daniel Opdenbosch -- Tubular Tissue Engineering Based on Microfluidics / Lixue Tang, Wenfu Zheng, Xingyu Jiang -- Construction of Three-Dimensional Tissues with Capillary Networks by Coating of Nanometer- or Micrometer-Sized Film on Cell Surfaces / Michiya Matsusaki, Akihiro Nishiguchi, Chun-Yen Liu, Mitsuru Akashi -- Three-dimensional Biofabrication on Nematic Ordered Cellulose Templates / Tetsuo Kondo -- Preparation and Application of Biomimetic Materials Inspired by Mussel Adhesive Proteins / Heng Shen, Zhenchao Qian, Ning Zhao, Jian Xu -- Self-assembly of Polylactic Acid-based Amphiphilic Block Copolymers and Their Application in the Biomedical Field / Lin Xiao, Lixia Huang, Li Liu, Guang Yang -- Biomacromolecules. Electroconductive Bioscaffolds for 2D and 3D Cell Culture / Zhijun Shi, Lin Mao, Muhammad Wajid Ullah, Sixiang Li, Li Wang, Sanming Hu, Guang Yang -- Starch and Plant Storage Polysaccharides / Francisco Vilaplana, Wei Zou, Robert G Gilbert -- Conformational Properties of

Polysaccharide Derivatives / Ken Terao, Takahiro Sato -- Silk Proteins / Lallepak Lamboni, Tiatou Souho, Amarachi Rosemary Osi, Guang Yang -- Polypeptides Synthesized by Ring-opening Polymerization of N-Carboxyanhydrides / Yuan Yao, Yongfeng Zhou, Deyue Yan -- Preparation of Gradient Polymeric Structures and Their Biological Applications / Tao Du, Feng Zhou, Shutao Wang -- Biomaterials. Bioinspired Materials and Structures / Tom Masselter, Georg Bold, Marc Thielen, Olga Speck, Thomas Speck -- Thermal- and Photo-deformable Liquid Crystal Polymers and Bioinspired Movements / Yuyun Liu, Jiu-an Lv, Yanlei Yu -- Tuning Mechanical Properties of Protein Hydrogels / Xiao-Wei Wang, Dong Liu, Guang-Zhong Yin, Wen-Bin Zhang -- Dendritic Polymer Micelles for Drug Delivery / Mosa Alsehli, Mario Gauthier -- Bone-inspired Biomaterials / Frank A Muller -- Research Progress in Biomimetic Materials for Human Dental Caries Restoration / Yazi Wang, Fengwei Liu, Eric Habib, Ruili Wang, Xiaoze Jiang, XX Zhu, Meifang Zhu.

Sommario/riassunto

An authoritative introduction to the science and engineering of bioinspired materials Bioinspired Materials Science and Engineering offers a comprehensive view of the science and engineering of bioinspired materials and includes a discussion of biofabrication approaches and applications of bioinspired materials as they are fed back to nature in the guise of biomaterials. The authors also review some biological compounds and shows how they can be useful in the engineering of bioinspired materials. With contributions from noted experts in the field, this comprehensive resource considers biofabrication, biomacromolecules, and biomaterials. The authors illustrate the bioinspiration process from materials design and conception to application of bioinspired materials. In addition, the text presents the multidisciplinary aspect of the concept, and contains a typical example of how knowledge is acquired from nature, and how in turn this information contributes to biological sciences, with an accent on biomedical applications. This important resource: Offers an introduction to the science and engineering principles for the development of bioinspired materials Includes a summary of recent developments on biotemplated formation of inorganic materials using natural templates Illustrates the fabrication of 3D-tumor invasion models and their potential application in drug assessments Explores electroactive hydrogels based on natural polymers Contains information on turning mechanical properties of protein hydrogels for biomedical applications Written for chemists, biologists, physicists, and engineers, Bioinspired Materials Science and Engineering contains an indispensible resource for an understanding of bioinspired materials science and engineering.
