

1. Record Nr.	UNINA9910816361903321
Autore	Marcus M (Moshe), <1937->
Titolo	Nonlinear second order elliptic equations involving measures // Moshe Marcus, Laurent Veron
Pubbl/distr/stampa	Berlin ; ; Boston : , : Walter de Gruyter GmbH & Co. KG , [2014] ©2014
ISBN	3-11-030531-3
Descrizione fisica	1 online resource (264 p.)
Collana	De Gruyter Series in Nonlinear Analysis and Applications ; ; 21 De Gruyter series in nonlinear analysis and applications, , 0941-813X ; ; 21
Classificazione	SK 540
Altri autori (Persone)	VeronLaurent
Disciplina	515/.3533
Soggetti	Differential equations, Elliptic Differential equations, Nonlinear
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Frontmatter -- Preface -- Contents -- Chapter 1. Linear second order elliptic equations with measure data -- Chapter 2. Nonlinear second order elliptic equations with measure data -- Chapter 3. The boundary trace and associated boundary value problems -- Chapter 4. Isolated singularities -- Chapter 5. Classical theory of maximal and large solutions -- Chapter 6. Further results on singularities and large solutions -- Bibliography -- Index
Sommario/riassunto	In the last 40 years semi-linear elliptic equations became a central subject of study in the theory of nonlinear partial differential equations. On the one hand, the interest in this area is of a theoretical nature, due to its deep relations to other branches of mathematics, especially linear and nonlinear harmonic analysis, dynamical systems, differential geometry and probability. On the other hand, this study is of interest because of its applications. Equations of this type come up in various areas such as problems of physics and astrophysics, curvature problems in Riemannian geometry, logistic problems related for instance to population models and, most importantly, the study of branching processes and superdiffusions in the theory of probability. The aim of this book is to present a comprehensive study of boundary value problems for linear and semi-linear second order elliptic

equations with measure data. We are particularly interested in semi-linear equations with absorption. The interactions between the diffusion operator and the absorption term give rise to a large class of nonlinear phenomena in the study of which singularities and boundary trace play a central role. This book is accessible to graduate students and researchers with a background in real analysis and partial differential equations.
