

1. Record Nr.	UNINA9910816499403321
Autore	Wooding F. B. P
Titolo	Comparative placentation [[electronic resource]] : structures, functions, and evolution // Peter Wooding, Graham Burton
Pubbl/distr/stampa	Berlin, : Springer, c2008
ISBN	1-281-75690-3 9786611756901 3-540-78797-6
Edizione	[1st ed. 2008.]
Descrizione fisica	1 online resource (309 p.)
Altri autori (Persone)	BurtonGraham (Graham J.)
Disciplina	573.6/719 573.6719
Soggetti	Physiology, Comparative Placenta
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 249-291) and index.
Nota di contenuto	Placentation Fundamentals -- Implantation, Maternofetal Exchange and Vascular Relationships -- Fish, Amphibian, Bird and Reptile Placentation -- Monotreme and Marsupial Placentation -- Eutheria: Epitheliochorial Placentation Pig and Horse -- Synepitheliochorial Placentation : Ruminants (Ewe and Cow) -- Endotheliochorial Placentation : Cat, Dog, Bat -- Haemochorial Placentation: Mouse, Rabbit, Man, Apes, Monkeys -- Placental Immunology, Viviparity, Evolution -- Hybridisation, Cloning and Fetal Origins of Adult Disease.
Sommario/riassunto	Science produces fascinating puzzles: why is there such a range of placental structures when other mammalian organs are so structurally uniform ? Why and how did the different placental structures evolve ? Comparative placental studies can facilitate the identification of the common factors in placental growth, differentiation and function and their relevance to possible evolutionary pathways. Comparative Placentation is the only book presenting up-to-date data illustrating the great variety of structure but uniform function of vertebrate placentas from fish to man. This information is essential for selection of suitable models to investigate particular practical problems of impaired or anomalous growth in human and animal placentation. The

unique collection of the best light and electron micrographs from the last thirtyfive years which precisely illustrate the structural range in each taxon, make the book the most authoritative publication in this field and a vital source of information for anyone interested on reproductive physiology, anatomy and medicine.
