Sommario/riassunto

The book provides a new angle for the study of otherwise amply discussed discourse and interactional phenomena. The new perspective consists in addressing the interconnections between resonance, stance, represented discourse and joking in Mexican conversational discourse. In so doing, it contributes to a better understanding of the interplay between collaboration, intersubjectivity and emergence, among other relevant issues. Scholars and advanced students concerned with dialogic syntax theory, stance theory and Spanish, will find the present analysis interesting and innovative. However, the writing and methodology, based on clearly discussed and presented examples from selected conversational excerpts, including graphic representations of linguistic and discourse data, makes the analysis easy to follow also to non-specialists. The book is thus interesting to a broad circle of readers, whether they are concerned with any of the issues dealt with or with their mutual connections, whether they are specialists or not.
