

1. Record Nr.	UNINA9910817171203321
Titolo	The promises and perils of digital strategies in achieving health equity : workshop summary / / Karen M. Anderson and Steve Olson, rapporteurs ; Roundtable on the Promotion of Health Equity and the Elimination of Health Disparities [and three others]
Pubbl/distr/stampa	Washington, District of Columbia : , : The National Academies Press, , 2016 ©2016
ISBN	0-309-43894-2 0-309-43892-6
Descrizione fisica	1 online resource (83 pages) : illustrations, tables
Disciplina	331.76161072
Soggetti	Medical technology Medical care - Information technology Medical care, Cost of Equality - Health aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction of the workshop -- Technology and health disparities -- Engaging providers and racial/ethnic minority patients in digital strategies -- Examples of engaging racial/ethnic minority communities in digital health strategies -- Policy and technology perspectives -- Synthesis of workshop messages -- References -- Appendix A: Examples of eHealth solutions featured at the workshop -- Appendix B: Workshop agenda -- Appendix C: Speaker biographical sketches.
Sommario/riassunto	"Health care is in the midst of a dramatic transformation in the United States. Spurred by technological advances, economic imperatives, and governmental policies, information technologies are rapidly being applied to health care in an effort to improve access, enhance quality, and decrease costs. At the same time, the use of technologies by the consumers of health care is changing how people interact with the health care system and with health information. These changes in health care have the potential both to exacerbate and to diminish the

stark disparities in health and well-being that exist among population groups in the United States. If the benefits of technology flow disproportionately to those who already enjoy better coverage, use, and outcomes than disadvantaged groups, health disparities could increase. But if technologies can be developed and implemented in such a way to improve access and enhance quality for the members of all groups, the ongoing transformation of health care could reduce the gaps among groups while improving health care for all. To explore the potential for further insights into, and opportunities to address, disparities in underserved populations the National Academies of Sciences, Engineering, and Medicine held a workshop in October 2014. The workshop focused on (1) how communities are using digital health technologies to improve health outcomes for racial and ethnic minority populations, (2) how community engagement can improve access to high-quality health information for members of these groups, and (3) on models of successful technology-based strategies to reduce health disparities. This report summarizes the presentations and discussions at the workshop"--
