Autore	Janic Milan
Titolo	Airport analysis, planning and design [[electronic resource]] : demand, capacity and congestion // Milan Janic
Pubbl/distr/stampa	New York, : Nova Science, c2009
ISBN	1-61761-560-9
Edizione	[1st ed.]
Descrizione fisica	1 online resource (290 p.)
Collana	Transportation infrastructure : roads, highways, bridges, airports and mass transit series
Disciplina	387.7/360684
Soggetti	Airports - Planning Airports - Design and construction
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	AIRPORT ANALYSIS, PLANNING AND DESIGN: DEMAND, CAPACITY AND CONGESTION; AIRPORT ANALYSIS, PLANNING AND DESIGN: DEMAND, CAPACITY AND CONGESTION; LIBRARY OF CONGRESS CATALOGING-IN-PUBLICATION DATA; CONTENTS; PREFACE; ABOUT THE AUTHOR; Chapter 1: INTRODUCTION; 1.1. Sommario/riassunto

Airports are components of the air transport system together with the ATC (Air Traffic Control), and airlines. Many existing airports have been confronted with increasing requirements for providing the sufficient airside and landside capacity to accommodate generally growing but increasingly volatile and uncertain air transport demand, efficiently, effectively, and safely. This demand has consisted of aircraft movements, passengers, and freight shipments. In parallel, the environmental constraints in terms of noise, air pollution, and land use (take) have strengthened. Under such circumstances
