### Sommario/riassunto

New for the Wiley Series in Forensic Clinical Psychology, *Cognitive Approaches to the Treatment of Sexual Offenders* describes and evaluates the current methods of measuring sexual interest in sex offenders - namely penile plethysmography, the Abel Assessment for Sexual Interest, Affinity 2.1, the Implicit Association Test, the Stroop test and the polygraph. The book also discusses how established cognitive assessment methods such as the attentional blink and the startle probe reflex can be adapted for use with sex offenders. It therefore brings together in one volume all the latest research an
