Contact phenomena in Austronesian and Papuan languages / Reesink, Ger / Dunn, Michael -- General Index -- Index of Languages and Language Groupings
Sommario/riassunto	The Languages and Linguistics of the New Guinea Area: A Comprehensive Guide is part of the multi-volume reference work on the languages and linguistics of all major regions of the world. The island of New Guinea and its offshore islands is arguably the most diverse and least documented linguistic hotspot in the world - home to

over 1300 languages, almost one fifth of all living languages, in more than 40 separate families, along with numerous isolates. Traditionally one of the least understood linguistic regions, ongoing research allows for the first time a comprehensive guide. Given the vastness of the region and limited previous overviews, this volume focuses on an account of the families and major languages of each area within the region, including brief grammatical descriptions of many of the languages. The volume also includes a typological overview of Papuan languages, and a chapter on Austronesian-Papuan contact. It will make accessible current knowledge on this complex region, and will be the standard reference on the region. It is aimed at typologists, endangered language specialists, graduate and advanced undergraduate students, and all those interested in linguistic diversity and understanding this least known linguistic region.
