Sommario/riassunto	From the killing fields of Rwanda and Srebrenica a decade ago to those of Darfur today, the United Nations has repeatedly failed to confront genocide. This is evinced, author and journalist Adam LeBor maintains, in a May 1995 document from Yasushi Akashi, the most senior UN official in the field during the Yugoslav wars, in which he refused to authorize air strikes against the Serbs for fear they would "weaken" Milosevic. More recently, in 2003, urgent reports from UN officials in the Sudan detailing atrocities from Darfur were ignored for a year because they were politically inconvenient. This book is the first to examine in detail the crucial role of the Secretariat, its relationship with the Security Council, and the failure of UN officials themselves to confront genocide. LeBor argues the UN must return to its founding principles, take a moral stand and set the agenda of the Security Council instead of merely following the lead of the great powers. LeBor draws on dozens of firsthand interviews with UN officials, current and

former, and such international diplomats as Madeleine Albright, Richard Holbrooke, Douglas Hurd, and David Owen. This book will set the terms for discussion when UN Secretary General Kofi Annan steps down to make room for a new head of the world body, and political observers assess Annan's legacy and look to the future of the world organization.

Sommario/riassunto	Oxford Assess and Progress: Clinical Specialties is the ideal self-assessment tool for students looking to test their knowledge of the core clinical specialties. Fully cross-referenced to the ninth edition of the Oxford Handbook of Clinical Specialties, this compact volume contains hundreds of questions on a wide spectrum of conditions across the specialties. This new edition contains over 350 Single Best Answer and Extended Matching questions addressing core clinical

topics and professional skills. Each answer is marked with a progression point to help the reader to track their progress and r

Sommario/riassunto	The book provides a concise and rigor introduction to the fundamentals of methods for solving the principal problems of modern non-linear dynamics. This monograph covers the basic issues of the theory of integrable systems and the theory of dynamical chaos both in nonintegrable conservative and in dissipative systems. A distinguishing feature of the material exposition is to add some comments, historical information, brief biographies and portraits of the researchers who made the most significant contribution to science. This allows one to present the material as accessible and attractive to students to acquire indepth scientific knowledge of nonlinear mechanics, feel the

atmosphere where those or other important discoveries were made. The book can be used as a textbook for advanced undergraduate and graduate students majoring in high-tech industries and high technology (the science based on high technology) to help them to develop lateral thinking in early stages of training.
