Nota di contenuto	Are there universal ethical principles that should govern the conduct of medicine and research worldwide? -- Is it morally acceptable to buy and sell organs for human transplantation? -- Were it physically safe, would human reproductive cloning be acceptable? -- Is the deliberately induced abortion of a human pregnancy ethically justifiable? -- Is it ethical to patent or copyright genes, embryos, or their parts? -- Should minors have the right to refuse treatment, even when against the will of their parents or guardians? -- Is physician-assisted suicide ever ethical? -- Should stem cell research utilizing embryonic tissue be conducted? -- Should we prohibit the use of chimpanzees and other great apes in biomedical research? -- Should the United States of America adopt universal health care? -- Is there a legitimate place for human genetic enhancement? -- Can there be agreement as to what constitutes human death? -- Is there ever a circumstance in which a doctor may withhold information? -- Should in vitro fertilization be an option for a woman? -- Are international clinical trials exploitative?.
Sommario/riassunto	This volume features a collection of arguments contributed by many of today's top bioethics scholars, focusing on core bioethical concerns of the twenty-first century. Written in a debate-style format for accessibility to non-specialists, it features general introductions to

each topic that precede scholarly debates, and presents the latest, cutting-edge thoughts on relevant bioethics ideas, arguments, and debates. -- From publisher's website.
