Sommario/riassunto

Thanks to inexpensive computers and data communications, the speed and volume of human communication are exponentially greater than they were even a quarter-century ago. Not since the advent of the telephone and telegraph in the nineteenth century has information technology changed daily life so radically. We are in the midst of what Gerald Brock calls a second information revolution. Brock traces the complex history of this revolution, from its roots in World War II through the bursting bubble of the Internet economy. As he explains, the revolution sprang from an interdependent series of technological advances, entrepreneurial innovations, and changes to public policy. Innovations in radar, computers, and electronic components for defense projects translated into rapid expansion in the private sector, but some opportunities were blocked by regulatory policies. The contentious political effort to accommodate new technology while protecting beneficiaries of the earlier regulated monopoly eventually resulted in a regulatory structure that facilitated the explosive growth in data communications. Brock synthesizes these complex factors into a readable economic history of the wholesale transformation of the way we exchange and process information. Table of Contents: Acknowledgments Abbreviations 1. Introduction The Promise of Regulation Conceptual Framework 2. The First Information Revolution The Development of Telegraph Services The Telephone and State Regulation Radio and Federal Regulation 3. Technological Origins of the Second Information Revolution, 1940-1950 Radar The Transistor Electronic Digital Computers 4. The SAGE Project I. THE SEPARATE WORLDS OF COMPUTERS AND COMMUNICATIONS, 1950-1968 5. The Early Semiconductor Industry The Creation of a Competitive Market Innovation and the Integrated Circuit Falling Prices, Rising Output 6. The Early Commercial Computer Industry Vacuum-Tube and Transistor Computers The System/360 and IBM Dominance Alternatives to IBM Computers 7. The Regulated Monopoly Telephone Industry Antitrust and the 1956 Consent Decree Microwave Technology and Potential Long Distance Competition Central Office Switches Terminal Equipment II. BOUNDARY DISPUTES AND LIMITED COMPETITION, 1969-1984 8. Data Communications Packet-Switching and the Arpanet Network Protocols and Interconnection Local Area Networks and Ethernet 9. From Mainframes to Microprocessors Intel and the Microprocessor Personal Computers and Workstations 10. The Computer-Communications Boundary Computer-Assisted Messages: Communications or Data Processing? Smart Terminals: Teletypewriters or Computers? Interconnection of Customer-Owned Equipment with the Telephone Network The Deregulation of Terminal Equipment The Deregulation of Enhanced Services 11. Fringe Competition in Long Distance Telephone Service Competition in Specialized Services Competition in Switched Services The Transition to Optical Fiber 12. Divestiture and Access Charges The Divestiture Access Charges The Enhanced Service Provider Exemption III. INTERCONNECTED

COMPETITION AND INTEGRATED SERVICES, 1985-2002 13. Mobile
Telephones and Spectrum Reform Early Land Mobile Telephones
Cellular Spectrum Allocation Cellular Licensing Problems Spectrum
Institutional Reform PCS and Auctions 14. Local Competition and the
Telecommunications Act of 1996 Competitive Access Providers
Interconnection: CAP to CLEC The Telecommunications Act of 1996
Implementation of the Telecommunications Act of 1996 15. The
Internet and the World Wide Web The Commercial Internet and
Backbone Interconnection The Development of the Web The New
Economy Financial Boom and Bust Real Growth in Telecommunication
and Price Benefits 16. Conclusion Technological Progress and Policy
Evolution The Process of Institutional Change Final Comment
References Index Reviews of this book: The Second Information
Revolution is important reading for anyone who needs to understand
the functioning of American telecommunications, either to be able to
analyse today's financial markets or to understand or influence public
policy in this area.--Wendy M. Grossman, Times Higher Education
Supplement [UK]Reviews of this book: Brock traces a phenomenon he
refers to as the 'second information revolution.' According to Brock,
there have been two times in history when information technology has
dramatically changed daily life. The first 'information revolution'
occurred with the advent of the telephone and telegraph, which made
communication less expensive and more readily available. The second
information revolution is currently in progress.A concise, thorough, and
well-written history of the transformation in exchanging and
processing of information.--K. A. Coombs, Choice
