Sommario/riassunto	Considering a graduate degree in economics? Good choice: the twenty-first-century financial crisis and recession have underscored the relevance of experts who know how the economy works, should work, and could work. However, Ph.D. programs in economics are extremely competitive, with a high rate of attrition and a median time of seven years to completion. Also, economic professions come in many shapes and sizes, and while a doctoral degree is crucial training for some, it is less beneficial for others. How do you know whether a Ph.D. in economics is for you? How do you choose the right program—and how do you get the right program to choose you? And once you've survived years of rigorous and specialized training, how do you turn your degree

into a lifelong career and meaningful vocation? Getting a Ph.D. in Economics is the first manual designed to meet the specific needs of aspiring and matriculating graduate students of economics. With the perspective of a veteran, Stuart J. Hillmon walks the reader through the entire experience—from the Ph.D. admissions process to arduous first-year coursework and qualifying exams to arming up for the volatile job market. Hillmon identifies the pitfalls at each stage and offers no-holds-barred advice on how to navigate them. Honest, hard-hitting, and at times hilarious, this insider insight will equip students and prospective students with the tools to make the most of their graduate experience and to give them an edge in an increasingly competitive field.

Genitourinary Radiology: Male Genital Tract, Adrenal and Retroperitoneum: The Pathologic Basis provides a lavishly illustrated guide to the radiologic and pathologic features of a broad spectrum of diseases of the male genital tract, adrenal glands and retroperitoneum, including the entities most commonly encountered in day to day practice. The editors are authorities in the fields of genitourinary radiology and pathology, and the authors of each chapter are renowned radiologists, with pathology content provided by an internationally recognized genitourinary pathologist. General, plain film, intravenous pyelography, ultrasound, computed tomography, magnetic resonance imaging, nuclear medicine imaging and PET imaging of each disease entity are included. Accompanying the majority of the radiological narratives are complementary descriptions of the gross and microscopic features of the disease entities. Genitourinary Radiology: Male Genital Tract, Adrenal and Retroperitoneum: The Pathologic Basis is aimed at radiologists in private and academic practice, radiology residents, urologists, urology trainees, pathology trainees and fellows specializing in genitourinary pathology.
