Sommario/riassunto

While there continues to be refinement in defining and assessing sustainable management, there remains the urgent need for policies that create the conditions that support sustainability and can halt or slow destructive practices already underway. Carol Colfer and her contributors maintain that standardized solutions to forest problems from afar have failed to address both human and environmental needs. Such approaches, they argue, often neglect the knowledge that local stakeholders have accumulated over generations as forest managers and do not address issues involving the diversity and well-
