Risk Shifting, Statistical Discrimination, and the Stability of Earnings -- 10. Signaling, Screening, and Information -- 11. Learning by Observing and the Distribution of Wages -- Contributors -- Author Index -- Subject Index
Sommario/riassunto	The papers in this volume present an excellent sampling of the best of current research in labor economics, combining the most sophisticated theory and econometric methods with high-quality data on a variety of problems. Originally presented at a Universities-National Bureau Committee for Economic Research conference on labor markets in 1978, and not published elsewhere, the thirteen papers treat four interrelated themes: labor mobility, job turnover, and life-cycle dynamics; the analysis of unemployment compensation and

employment policy; labor market discrimination; and labor market information and investment. The Introduction by Sherwin Rosen provides a thoughtful guide to the contents of the papers and offers suggestions for continuing research.
