| Nota di contenuto | Introduction to genetic predispositions and the politics of terror -- Genes, media and the government in the national narrative on terror -- The criminalization of language in the war on terror -- Genetic predisposition, religious belief and psychological operations in the war on terror. |
| Sommario/riassunto | In this book, the authors examine how the human brain reacts to expressions of political ideology regarding terrorism. By comparing a variety of case studies, they demonstrate how similar acts accompanied by starkly different political language can create cognitive dissonance in the minds of the electorate and influence policy choices. <br |
