Sommario/riassunto	The first modern history of Scottish woodlands explores the changing relationship between trees and people from the time of Scotland's first

settlement, focusing on the period 1500 to 1920. Drawing on work in natural science, geography and history, as well as on the authors' own research, it presents an accessible and readable account that balances social, economic and environmental factors. Two opening chapters describe the early history of the woodlands.
