

1. Record Nr.	UNINA9910819790203321
Autore	Zhang Zhijun
Titolo	Antenna design for mobile devices / / Zhijun Zhang
Pubbl/distr/stampa	Singapore ; , : John Wiley & Sons (Asia), , 2011 [Piscataqay, New Jersey] : , : IEEE Xplore, , [2011]
ISBN	6613175021 1-283-17502-9 9786613175021 0-470-82833-1 0-470-82447-6 0-470-82448-4
Edizione	[First edition]
Descrizione fisica	1 online resource (300 pages)
Classificazione	ZN 6440
Disciplina	621.384/135
Soggetti	Radio - Antennas - Design and construction Mobile communication systems - Equipment and supplies - Design and construction Miniature electronic equipment - Design and construction
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Front Matter -- Introduction -- Antenna Matching -- External Antenna -- Internal Antenna -- Antenna Measurement -- Regulations Related to Antenna Engineers -- Appendix: User Manual for ZJ_Antenna_Matching Software -- Index.
Sommario/riassunto	Written by an antenna engineer turned professor who has worked at Apple, Nokia and Amphenol, Antenna Design for Mobile Devices is a comprehensive guide for fresh and intermediate engineers involved in antenna design. The book instructs readers through all aspects of real world antenna designs, which includes how to make a stable antenna fixture, designing various types of antennas, designing an antenna with good manufacturability, using various matching technique to improve antenna performance, setting up production measurement for mass manufacturing, and making antenna SAR and HAC compliant. Most popular antenna categories, such as internal PIFA, integral IFA, internal

folded monopole, ceramic antennas, stubby antennas and whip stubby antennas, are introduced in the book. The book focuses on the basic principle of each kind of antenna and emphasizes on key parameters of antenna optimization. Complimentary matching software, which accompanies the book, is provided so readers can practice various antenna matching technique and design matching circuits for real projects.. A one-stop design reference containing all an engineer needs when designing antennas. Accessible to readers of many levels, from introductory to specialist. Presents shortcuts for engineers who lack antenna knowledge but need no-hassle techniques for designing simple antennas. Contains hands-on knowledge not available in other books. Written by a practicing expert who has hired and trained numerous engineers. Incorporates the various techniques used by pure-play antenna firms, established mobile device brands, and new entrants to the mobile space. Comes with antenna matching software written by the author, which can be used for practice and real-world projects. Presentation slides with lecture notes available for instructor use. This book is targeted at practicing antenna engineers, particularly those focusing on mobile devices, as well as researchers and academics looking to keep up with this quick-changing field. Engineering managers will find it to be a helpful guide for teaching new hires, while new hires, by using the book themselves, will be able to quickly gain expert-level proficiencies. The book is also suitable for wireless network equipment engineers, who desire a stronger sense of antenna principles, as well as electronic engineering students studying electromagnetics. Readers should possess a basic undergraduate-level understanding of electromagnetic theory. Companion website for the book: <http://www.wiley.com/go/zhangantenna>.
