

1. Record Nr.	UNINA9910820008703321
Titolo	Linux applications on pSeries [[electronic resource] /] / [Jan-Rainer Lahmann ... et al.]
Pubbl/distr/stampa	[Austin], : IBM International Technical Support Organization, 2003
Edizione	[2nd ed.]
Descrizione fisica	xviii, 310 p. : ill
Collana	Redbooks
Altri autori (Persone)	LahmannJan-Rainer
Disciplina	005.4/32
Soggetti	Operating systems (Computers) Application software
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"February 2003." "SG24-6033-01."
Nota di bibliografia	Includes bibliographical references (p. 287-299) and index.
Sommario/riassunto	The strengths of the AIX operating system are well known among the UNIX software community. Its reliability and great degree of scaling make AIX the perfect choice for hosting mission-critical applications. It is a robust and flexible operating system that meets all the requirements for the various demands of e-business environments. At the same time, Linux is maturing rapidly and generating excitement among software developers that has not been seen in many years. This IBM Redbooks publication will show you what you need to do to run Linux applications on pSeries. The AIX Toolbox for Linux Applications contains a large collection of Open Source and GNU software built for AIX 5L and AIX 4.3.3 for IBM eServer pSeries systems and IBM RS/6000. This publication will help you comprehend and install the Toolbox, understand the procedure to follow for porting Open Source Software utilizing the Toolbox, and give a detailed description of a large number of the tools delivered in the Toolbox. It will also describe the procedure to install a native Linux operating system on several pSeries hardware types in detail, including some common Linux applications.
