

1. Record Nr.	UNINA9910820224703321
Autore	Kagan Jerome
Titolo	The long shadow of temperament [[electronic resource] /] / Jerome Kagan & Nancy Snidman
Pubbl/distr/stampa	Cambridge, MA, : Belknap Press of Harvard University Press, 2004
ISBN	0-674-26488-6 0-674-03926-2
Descrizione fisica	1 online resource (305 p.)
Classificazione	CQ 5000
Altri autori (Persone)	SnidmanNancy C
Disciplina	155.4/1826
Soggetti	Temperament in children Inhibition in children Temperament Inhibition Nature and nurture
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. [246]-282) and index.
Nota di contenuto	Frontmatter -- Acknowledgments -- Contents -- Prologue -- 1. Overview -- 2. The Tapestries of Temperament -- 3. Biological Responses to Unfamiliarity -- 4. Behavioral and Biological Assessments -- 5. Integrating Behavior and Biology -- 6. Implications -- References -- Index
Sommario/riassunto	We have seen these children—the shy and the sociable, the cautious and the daring—and wondered what makes one avoid new experience and another avidly pursue it. At the crux of the issue surrounding the contribution of nature to development is the study that Jerome Kagan and his colleagues have been conducting for more than two decades. In <i>The Long Shadow of Temperament</i> , Kagan and Nancy Snidman summarize the results of this unique inquiry into human temperaments, one of the best-known longitudinal studies in developmental psychology. These results reveal how deeply certain fundamental temperamental biases can be preserved over development. Identifying two extreme temperamental types—inhibited and uninhibited in childhood, and high-reactive and low-reactive in very young babies—Kagan and his colleagues returned to these

children as adolescents. Surprisingly, one of the temperaments revealed in infancy predicted a cautious, fearful personality in early childhood and a dour mood in adolescence. The other bias predicted a bold childhood personality and an exuberant, sanguine mood in adolescence. These personalities were matched by different biological properties. In a masterly summary of their wide-ranging exploration, Kagan and Snidman conclude that these two temperaments are the result of inherited biologies probably rooted in the differential excitability of particular brain structures. Though the authors appreciate that temperamental tendencies can be modified by experience, this compelling work—an empirical and conceptual tour-de-force—shows how long the shadow of temperament is cast over psychological development.
