Sommario/riassunto	The book rethinks the central categories of Marx's work beyond any philosophy of history, providing a critical analysis of his political and theoretical development from his early writings, to the elaboration of the critique of political economy and his final anthropological studies on pre-individualistic and communist forms. The study aims to integrate the paradigm of the spatialisation of time with that of the temporalisation of space, showing how capital places diverse temporalities into hierarchies that incessantly produce and reproduce new forms of class struggle. An adequate historiographical paradigm for globalised capitalism has to consider the plurality of temporal layers that are combined and come into conflict in the violently unifying historical dimension of modernity.
