Sommario/riassunto

By presenting the latest technological advances and growing national and international regulation, this new book explores state-of-the-art developments in the challenging field of tissue and cell processing. It provides a guide to easier and safer practice in operational principles of preservation, decontamination, and sterilization. Nearly half of the book is devoted completely to tissue- or cell-specific issues relating to processing. With lists of learning points and case studies which consist of sample processing protocols, descriptions of where processing went wrong, sample risk assessmen
