Sommario/riassunto	Atherothrombosis refers to the coupling of atherosclerosis and thrombosis, and it is the leading cause of the majority of preventable deaths in the modern world. The medical, economic, social, and societal consequences of atherothrombosis are enormous, which make it a dynamic area for development of new pharmacologic agents. Atherothrombosis in Clinical Practice focuses upon the many clinical manifestations of atherothrombosis and therapies that presently exist, with a focus on evolving therapeutic approaches. First, atherothrombosis is defined and the epidemiology is explored. Then, the speci
