

1. Record Nr.	UNINA9910821096803321
Autore	Dvorak R
Titolo	Celestial dynamics : chaoticity and dynamics of celestial systems // Rudolf Dvorak and Christoph Lhotka
Pubbl/distr/stampa	Weinheim, Germany, : Wiley-VCH Verlag GmbH & Co. KGaA, 2013
ISBN	9783527651870 352765187X 9783527651856 3527651853 9783527651887 3527651888
Edizione	[1st ed.]
Descrizione fisica	1 online resource (323 p.)
Altri autori (Persone)	LhotkaChristoph
Disciplina	521
Soggetti	Celestial mechanics Differentiable dynamical systems
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 295-304) and index.
Nota di contenuto	Celestial Dynamics; Contents; Preface; 1 Introduction: the Challenge of Science; 2 Hamiltonian Mechanics; 2.1 Hamilton's Equations from Hamiltonian Principle; 2.2 Poisson Brackets; 2.3 Canonical Transformations; 2.4 Hamilton-Jacobi Theory; 2.5 Action-Angle Variables; 3 Numerical and Analytical Tools; 3.1 Mappings; 3.1.1 Simple Examples; 3.1.2 Hadjidemetriou Mapping; 3.2 Lie-Series Numerical Integration; 3.2.1 A Simple Example; 3.3 Chaos Indicators; 3.3.1 Lyapunov Characteristic Exponent; 3.3.2 Fast Lyapunov Indicator; 3.3.3 Mean Exponential Growth Factor of Nearby Orbits 3.3.4 Smaller Alignment Index 3.3.5 Spectral Analysis Method; 3.4 Perturbation Theory; 3.4.1 Lie-Transformation Method; 3.4.2 Mapping method; 4 The Stability Problem; 4.1 Review on Different Concepts of Stability; 4.2 Integrable Systems; 4.3 Nearly Integrable Systems; 4.4 Resonance Dynamics; 4.5 KAM Theorem; 4.6 Nekhoroshev Theorem; 4.7 The Froeschle-Guzzo-Lega Hamiltonian; 5 The Two-Body Problem; 5.1 From Newton to Kepler; 5.2 Unperturbed Kepler Motion; 5.3 Classification of Orbits: Ellipses, Hyperbolae and Parabolae; 5.4 Kepler

Equation; 5.5 Complex Description; 5.5.1 The KS-Transformation  
5.6 Motion in Space and the Keplerian Elements 5.7 Astronomical  
Determination of the Gravitational Constant; 5.8 Solution of the Kepler  
Equation; 6 The Restricted Three-Body Problem; 6.1 Set-Up and  
Formulation; 6.2 Equilibria of the System; 6.3 Motion Close to L4 and  
L5; 6.4 Motion Close to L1, L2, L3; 6.5 Potential and the Zero Velocity  
Curves; 6.6 Spatial Restricted Three-Body Problem; 6.7 Tisserand  
Criterion; 6.8 Elliptic Restricted Three-Body Problem; 6.9 Dissipative  
Restricted Three-Body Problem; 7 The Sitnikov Problem; 7.1 Circular  
Case: the MacMillan Problem; 7.1.1 Qualitative Estimates  
7.2 Motion of the Planet off the z-Axes 7.3 Elliptic Case; 7.3.1  
Numerical Results; 7.3.2 Analytical Results; 7.4 The Vrabcic Mapping;  
7.5 General Sitnikov Problem; 7.5.1 Qualitative Estimates; 7.5.2 Phase  
Space Structure; 8 Planetary Theory; 8.1 Planetary Perturbation Theory;  
8.1.1 A Simple Example; 8.1.2 Principles of Planetary Theory; 8.1.3 The  
Integration Constants - the Osculating Elements; 8.1.4 First-Order  
Perturbation; 8.1.5 Second-Order Perturbation; 8.2 Equations of Motion  
for n Bodies; 8.2.1 The Virial Theorem; 8.2.2 Reduction to Heliocentric  
Coordinates  
8.3 Lagrange Equations of the Planetary n-Body Problem 8.3.1  
Legendre Polynomials; 8.3.2 Delaunay Elements; 8.4 The Perturbing  
Function in Elliptic Orbital Elements; 8.5 Explicit First-Order Planetary  
Theory for the Osculating Elements; 8.5.1 Perturbation of the Mean  
Longitude; 8.6 Small Divisors; 8.7 Long-Term Evolution of Our  
Planetary System; 9 Resonances; 9.1 Mean Motion Resonances in Our  
Planetary System; 9.1.1 The 13:8 Resonance between Venus and Earth;  
9.1.2 The 1:1 Mean Motion Resonance: Trojan Asteroids; 9.2 Method of  
Laplace-Lagrange; 9.3 Secular Resonances  
9.3.1 Asteroids with Small Inclinations and Eccentricities

---

Sommario/riassunto

Written by an internationally renowned expert author and researcher, this monograph fills the need for a book conveying the sophisticated tools needed to calculate exo-planet motion and interplanetary space flight. It is unique in considering the critical problems of dynamics and stability, making use of the software Mathematica, including supplements for practical use of the formulae. A must-have for astronomers and applied mathematicians alike.
