Sommario/riassunto	The present volume offers a new architecture for Functional Grammar, bringing together many discoveries of recent years. In a core article by Kees Hengeveld, a background is given to a dozen contributions by an international array of scholars, each of whom further develops the model in his or her own area of expertise. The volume concludes with

an epilogue by Hengeveld, in which he draws together the various strands into a united concept. The volume will be a central point of reference for work in Functional Grammar.
