Sommario/riassunto

The inspiration for this book arose out of a large international conference: the ninth World Environmental Education Congress (WEEC) organized under the theme of Culture/Environment. Similarly, the theme for this book focuses on the Culture/Environment nexus. The book is divided into two parts: Part 1 consists of a series of research studies from an eclectic selection of researchers from all corners of the globe. Part 2 consists of a series of case studies of practice selected from a wide diversity of K-Postsecondary educators. The intent behind these selections is to augment and highlight the diversity of both cultural method and cultural voice in our descriptions of environmental education practice. The chapters focus on a multi-disciplinary view of Environmental Education with a developing view that Culture and Environment may be inseparable and arise from and within each other. Cultural change is also a necessary condition, and a requirement, to rebuild and reinvent our relationship with nature and to live more sustainably. The chapters address the spirit of supporting our praxis, and are therefore directed towards both an educator and researcher audience. Each chapter describes original research or curriculum development work.
