Sommario/riassunto	Learning from Change provides an overview of the common themes and experiences in participatory approaches to monitoring and evaluation across different institutions and sectors. It is a compilation of selected case studies and discussions between practitioners, academics, donors, and policymakers in participatory monitoring and evaluation (PM&E). It explores conceptual, methodological, institutional, and policy issues that need to be addressed to enrich our understanding and practice of PM&E. The book is in three sections. The first provides a general overview of PM&E, synthesizing literature surveys and regional reviews of PM&E practice around the world. The second presents case studies that illustrate the diverse range of settings and contexts in which PM&E is being applied. The third raises the key issues and challenges arising from the case studies and discussions, and proposes areas for future research and action.
