Sommario/riassunto	We have all heard talk of the intelligence of dolphins, elephants or great apes, or even, in different ways, ants and bees. But what is this intelligence all about? How do we know which animals are smart, and how do they use this superior intelligence? Written by one of the world's authorities in this field, this riveting book cover the themes of tool use, language, communication, imitation and social learning, numerical abilities, social cognition, emotion, self-recognition and awareness, drawing together the most recent and remarkable global research relating to almost every ""smart"" specie
