| Sommario/riassunto      | Where do the digital humanities really come from? Are they really news?<br>What are the theoretical and technical influences that participate in this<br>scientific field that arouses interest and questions? This book tries to<br>show and explain the main theories and methods that have allowed<br>their current constitution. The aim of the book is to propose a new way<br>to understand the history of digital humanities in a broader perspective<br>than the classic history with the project of Robert Busa. The short<br>digital humanities perspective neglects lots of actors and disciplines.                                  |

The book tries to show the importance of other fields than humanities computing like scientometry, infometry, econometry, mathematical linguistics, geography and documentation.
