Sommario/riassunto	Lawrence Stenhouse was one of the most distinguished, original and influential educationalists of his generation. His theories about curriculum, curriculum development, pedagogy, teacher research, and research as a basis for teaching remain compelling and fresh and continue to be a counterpoint to instrumental and technocratic thinking in education. In this book, renowned educationalists describe Stenhouse's contribution to education, explore the contemporary

relevance of his thinking and bring his work and legacy to the attention of a wide range of students, teachers, teacher educators a

Sommario/riassunto	Now in its second edition, Racism and Social Change in the Republic of Ireland provides an original and challenging account of racism in twenty-first century Irish society and locates this in its historical, political, sociological and policy contexts. It includes specific case studies of the experiences of racism in twenty-first century Ireland alongside a number of historical case studies that examine how modern Ireland came to marginalize ethnic minorities. Various chapters examine responses by the Irish state to Jewish refugees before, during and after the Holocaust, asylum seekers and Travellers. Other chapters examine policy responses to and academic debates on racism in Ireland. A key focus of the various case studies is upon the mechanics of exclusion experienced by black and ethnic minorities within institutional processes and of the linked challenge of taking racism

seriously in twenty-first century Ireland.

## Sommario/riassunto

This unique volume, resulting from a conference at the Chern Institute of Mathematics dedicated to the memory of Xiao-Song Lin, presents a broad connection between topology and physics as exemplified by the relationship between low-dimensional topology and quantum field theory. The volume includes works on picture (2+1)-TQFTs and their applications to quantum computing, Berry phase and Yang-Baxterization of the braid relation, finite type invariant of knots, categorification and Khovanov homology, Gromov-Witten type invariants, twisted Alexander polynomials, Faddeev knots, generalized Ricci flow
